Re: Materials License No. 21-16481-01

To Whom It May Concern:

This letter is to request deletion of authorization for the possession of depleted uranium in shielding of generators on the materials license listed above. This was added at the request of radiopharmaceutical companies; however, we have not used generators for over two years. We are currently using the services of a local radiopharmacy and have no intention of returning to generator use. If, in the future, we decide to return to generators, we will amend our license accordingly.

Please remove the code on our records that lead to the 2F fee charge associated with this material. If you have further questions, please contact Shan Marlette, consultant physicist at (906)273-0249.

Sincerely,

David Lord
President/CEO
