## General Comment

I want the NRC to protect the public from the potential hazards at Vermont Yankee. I support the state of Vermont in their insistence on maintaining the emergency planning zone and rejecting SAFSTOR while preferring the removal of waste from the spent fuel pools be started before 2019. I support the position of the 7 Representatives (Stuart, Toleno, Burke, Deen, Mrowicki, Long and Manwaring) and 2 Senators (White and Baliant) dated Feb. 27, 2015, in response to the Post Shutdown Decommissioning Activities Report.

It is urgent that the NRC recognize the tremendous risks due to the unsafe "storage" of the spent fuel -- and remember the meltdown at Fukushima. Do not make the children in the school across the street the tragic victims of unsafe storage. Until the spent fuel has been safely transferred to dry cask storage, the emergency planning zone must continue -- and even expanded to a 50-mile radius.

Entergy has not been a financially responsible company, certainly not in their failure to add funds to the decommissioning pool, which is needed for safe and timely decommissioning of this hazardous site. Entergy should be held accountable for their operating Vermont Yankee. Vermont and neighboring states should not be left at great risk and uncertainty in this very risky phase between "shutdown" and full decommissioning. I expect the NRC to do their job to protect the lives at risk from Vermont Yankee's vast stores of spent radioactive fuel.
