Dear Chairman Baran,
This shipment should interest you also.
Respectfully submitted,
marvin Lewis

Dear DOE Secretary,
What is going on here? 93% U 235 enrichment is bomb material!
Please check into this.
Respectfully,
marvlewis@juno.com

The license for this HEU export to the NRU, for medical isotope production, was posted in ADAMS (US NRC's digital library) several weeks ago and was mentioned in the Ottawa paper in Ian MacLeod's recent article on the NRU's closure. Hopefully, this is the very last HEU shipment to the NRU, which is what I'm hearing here in the US.

Would be good if someone in Canada keeps us posted on the status of the NRU (and if it will actually close in 2018) and on the development of non-HEU production methods for medical isotopes. Is anyone in Canada hearing that this will be the last HEU shipment?

The International Panel on Fissile Material (IPFM) March 12 blog "Another shipment of U.S. HEU to Canada is requested" is [linked here](#).

Tom

Dear HEUNL Shipment Concern,
Here comes the next feed stock for NRU.
7.56 Kg of Uranium-235 @ 93.3% enrichment (really?) under guise of:

NRC Export License Application
[Description of material]

Name of applicant, date of application, date received, application No., docket No.	Material type	Total quantity	End use	Destination
DOE/NNSA--Y-12 National Security Complex. February 25, 2015..... March 11, 2015..... XSNM3761..... 11006193.....	High-Enriched Uranium (93.35%)	7.56 kilograms uranium-235 contained in 8.1 kilograms uranium.	To fabricate and irradiate targets for the production of medical isotopes	Canada

in the National Research Universal reactor at Canadian Nuclear Laboratories in Canada.

License to export HEU to Canada med isotope facility <http://www.gpo.gov/fdsys/pkg/FR-2015-03-30/html/2015-07223.htm>

These three Federal Register Notifications were sent by Lisa K., they are an intriguing package. Thirty days to request hearing. This could be an opportunity to flush some information out. The proposed export of 7.56 kg (16.6 lbs) U-235 @ 93.3% enrichment for medical isotopes is interesting. Something about a duck comes to mind.

Thank you to: "satellitejam@yahoo.com"
