

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 7
901 NORTH 5TH STREET
KANSAS CITY, KANSAS 66101
JAN 26 2011

Mr. Mike Linder
Director
Nebraska Department of Environmental Quality
1200 N Street, Suite 400
Lincoln, Nebraska 68509-8922

Dear Mr. Linder:

The U.S. Environmental Protection Agency (EPA) has completed its review of the Nebraska Clean Water Act (CWA), Section 303(d) List of water quality-limited segments still requiring Total Maximum Daily Loads (TMDLs). The original list was submitted by the Nebraska Department of Environmental Quality (NDEQ) on March 30, 2010, and received by EPA on April 1, 2010, with a revised list submitted as an email attachment on August 27, 2010.

NDEQ's 303(d) list submittal included:

- 1) Nebraska's final 2010 CWA, Section 303(d) impaired waters list (including an identification of priority waters for TMDL development),
- 2) the full Integrated Report for 2010,
- 3) NDEQ's 2010 assessment and listing methodology,
- 4) water quality data files, and
- 5) a public participation responsiveness summary.

NDEQ's submission is formatted consistent with EPA guidance regarding "integrated reporting" and, therefore, contains five separate categories of listing waters. There are 260 water body segments and 459 impairments within Category 5 of Nebraska's integrated report which constitutes Nebraska's list of water quality-limited segments still requiring TMDLs subject to EPA approval.

Based on its review, EPA has determined that NDEQ's list of water quality-limited segments and their impairments still requiring TMDLs meets the requirement of Section 303(d) of the CWA and EPA's implementing regulations. EPA is therefore approving Nebraska's 2010 CWA, Section 303(d) List.

EPA commends Nebraska for assessing its lakes using new numeric translators for nutrients and chlorophyll *a*. However, it is stressed that future monitoring is necessary to make assessment determinations for lakes in Nebraska with limited data. EPA expects that Nebraska will resolve these assessment issues within the framework of its rotating basin monitoring approach.

I congratulate you and your staff for the completion of the list development and submission process. This process requires a significant amount of staff resources and involves a complex evaluation and assessment of water quality data. We look forward to working with NDEQ on the development of the 2012 Section 303(d) List in the near future.

If you would like to further discuss EPA's action, please contact me at 913-551-7782, or John DeLashmit, Chief, Water Quality Management Branch, at 913-551-7821.

Sincerely,

A handwritten signature in black ink, reading "Karen A. Flourney". The signature is written in a cursive, flowing style.

Karen A. Flourney
Acting Director
Water, Wetlands and Pesticides Division

Enclosure

Marty Link, NDEQ

2010 Decision Document of Nebraska's Clean Water Act, Section 303(d) List Water Quality Limited Segments Still Requiring TMDLs

I. Executive Summary

On March 30, 2010, the Nebraska Department of Environmental Quality (NDEQ) submitted its 2010 update to its Clean Water Act (CWA) Section 303(d) list to the United States Environmental Protection Agency (EPA) for review, herein referred to as the submittal. In response to EPA questions NDEQ submitted an amended version of the 2010 submittal for approval on August 27, 2010. Following its review of Nebraska's complete submittal, EPA is approving the state's addition of 107 water bodies and 258 water body/pollutant impairment pairs to its CWA Section 303(d) list. In addition, EPA approves the removal of 36 water bodies and 80 water body/pollutant impairment pairs to from the state's CWA Section 303(d) list. This document summarizes EPA's review and the basis for its decision.

Section 303(d)(1) of the CWA directs states to identify those waters within their jurisdictions for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard (referred to as 'water quality-limited segments' defined in 40 CFR §130.7), and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The CWA Section 303(d) listing requirement applies to water quality-limited segments impaired by pollutant loadings from both point and/or nonpoint sources. After a state submits its CWA Section 303(d) list to EPA, the Agency is required to approve or disapprove that list.

Nebraska's 2010 submittal is an update to the state's most recently approved CWA Section 303(d) list, approved by EPA on February 3, 2009 (i.e., the state's 2008 CWA Section 303(d) List). In its submittal, NDEQ included its assessment methodology to identify waters that do not meet the state's approved water quality standards and, therefore, are required to be included on CWA Section 303(d) lists. This 2010 assessment methodology includes revisions to the methodology used to develop the 2008 CWA Section 303(d) list for Nebraska. Water quality data that meet the assessment criteria included within the state's 2010 revised methodology were evaluated by NDEQ. Those waters determined to be water quality-limited were submitted to EPA as an update to the CWA Section 303(d) list. The methodology establishes specific protocols and thresholds for assessing water bodies, in addition to data sufficiency and data quality requirements. The methodology contains procedures for assessing both aquatic life use support and human health use support.

All waters which were included in Nebraska's approved 2010 CWA Section 303(d) List will remain on the state's CWA Section 303(d) list, unless NDEQ removes a water body from a future list and EPA approves the removal. NDEQ's submittal for EPA review includes an updated list reflecting, among other things:

- additional water bodies which NDEQ determined to be water quality-limited segments pursuant to the state's listing methodology and, therefore, included in the update of the CWA Section 303(d) list which NDEQ submitted to EPA for review; and
- water bodies included on Nebraska's previously approved 2008 CWA Section 303(d) List which were determined not to need TMDLs pursuant to the listing methodology and,

therefore, removed from the update of the CWA Section 303(d) list submitted to EPA for review.

While the guidelines, protocols, and requirements in state statute and the NDEQ methodology might be useful tools for NDEQ to use in identifying impaired waters, they are not part of the state's water quality standards. Hence, EPA did not rely solely on the statute or the methodology in reviewing Nebraska's list. Instead, EPA reviewed all available information including any information excluded under the state's methodology, to determine if the state's list was developed consistent with the underlying state water quality standards. EPA's review process generally followed a two-step analysis:

- 1) the Region reviewed the state's listing methodology, including data collection and data assessment requirements, to determine whether, based on Nebraska's approved water quality standards, the methodology was a reasonable method for identifying water quality-limited segments; and
- 2) where EPA was unsure whether the methodology was a reasonable method for identifying water quality-limited segments, the Region requested additional information from NDEQ to conduct further water body and data analysis.

Following EPA's decision on Nebraska's 2010 submission, the current CWA Section 303(d) list in the state of Nebraska contains:

- approved additions and removals to the 2008 CWA Section 303(d) List (Table 1); and
- an approved 2010 CWA Section 303(d) List (Table 2).

The statutory and regulatory requirements relevant to CWA Section 303(d) lists, and EPA's review of Nebraska's compliance with each requirement, are described in detail below.

II. Statutory and Regulatory Background

A. Identification of Water Quality-limited Segments for Inclusion on the CWA Section 303(d) List

Section 303(d)(1) of the CWA directs each state to identify those waters within its jurisdiction for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard, and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The Section 303(d) listing requirement applies to waters impaired by point and/or nonpoint sources, pursuant to EPA's long-standing interpretation of Section 303(d).

EPA regulations at 40 CFR § 130.7(b)(1) provide that states do not need to list waters where the following controls are adequate to implement applicable standards:

- technology-based effluent limitations required by the CWA;
- more stringent effluent limitations required by state or local authority; and
- other pollution control requirements required by state, local or federal authority.

B. Consideration of Existing and Readily Available Water Quality-Related Data and Information

In developing Section 303(d) lists, states are required to assemble and evaluate all existing and readily available water quality related data and information, including, at a minimum, consideration of existing and readily available data and information about the following categories of waters:

- waters identified as partially meeting or not meeting designated uses, or as threatened, in the state's most recent Section 305(b) report;
- waters for which dilution calculations or predictive modeling indicate non-attainment of applicable standards;
- waters for which water quality problems have been reported by governmental agencies, members of the public, or academic institutions; and
- waters identified as impaired or threatened in any Section 319 nonpoint assessment submitted to EPA (see 40 CFR § 130.7(b)(5)).

States are also required to consider any other data and information that is existing and readily available. EPA's 1991 Guidance for Water Quality-Based Decisions describes categories of water quality-related data and information that may be existing and readily available (see Guidance for Water Quality-Based Decisions, The TMDL Process, EPA Office of Water, 1991, Appendix C ("EPA's 1991 Guidance")). While states are required to evaluate all existing and readily available water quality-related data and information, states may decide to rely or not rely on particular data or information in determining whether to list particular waters.

In addition to requiring states to assemble and evaluate all existing and readily available water quality-related data and information, EPA regulations at 40 CFR § 130.7(b)(6) require states to include as part of their submissions to EPA, documentation to support decisions to rely or not to rely on particular data and information and decisions to list or not to list waters. Such documentation needs to include, at a minimum, the following information:

- a description of the methodology used to develop the list;
- a description of the data and information used to identify waters;
- a rationale for any decision to not use any existing and readily available data and information; and
- any other reasonable information requested by the Region.

C. Priority Ranking

EPA regulations also codify and interpret the requirement in the CWA, Section 303(d)(1)(A) of the CWA, that states establish a priority ranking for listed waters. The regulations at 40 CFR § 130.7(b)(4) require states to prioritize waters on their Section 303(d) lists for TMDL development, and also to identify those water quality-limited segments (WQLS) targeted for TMDL development in the next two years. In prioritizing and targeting waters, states must, at a minimum, take into account the severity of the pollution and the uses to be made of such waters (see CWA Section 303(d)(1)(A)). As long as these factors are taken into account, the CWA provides that states establish priorities for TMDL development. States may consider

other factors relevant to prioritizing waters for TMDL development, including immediate programmatic needs, vulnerability of particular waters as aquatic habitats, recreational, economic, and aesthetic importance of particular waters, degree of public interest and support, and state or national policies and priorities (see 57 FR 33040, 33045 [July 24, 1992], and EPA's 1991 Guidance).

Nebraska's prioritization of impaired waters for TMDL completion will be based on the availability of data, complexity of the problem, sources of impairment and other relevant factors. Where data is lacking, priorities are assigned in part based on the rotational basin, Section 319 priorities and NPDES/permitting priorities.

III. Nebraska's Approach to Identifying Waters for the 2010 Section 303(d) List

A. Nebraska's 2010 Integrated Report Format

EPA guidance for states in meeting the requirements of CWA Section 303(d) recommends a format which integrates the requirements of both CWA Sections 305(b) and 303(d) in creating a five category "integrated report" format. The 2010 Nebraska submission under CWA Section 303(d) is the fourth submission by the state of Nebraska using this "integrated report" format. Category 5 of the 2010 integrated report (IR) constitutes Nebraska's list of impaired waters for purposes of CWA Section 303(d), and is subject to EPA review and approval. EPA is taking action only on Category 5, which includes water quality-limited segments still requiring TMDLs. The following describes the five categories constituting Nebraska's IR and the number of water bodies assigned to each category by NDEQ. Under Nebraska's five category system, most water bodies are assigned to one category. EPA reviews and acts on only Category 5 waters and does not take action on waters in categories 1 – 4 except to determine whether the state has demonstrated an appropriate reason, with supporting information, to list the water body segment in a different category or subcategory. The information below regarding all five categories provides context for EPA's IR determination regarding Category 5 waters.

Category 1 consists of 42 water body segments attaining all designated uses.

Category 2 consists of 281 water body segments for which some, but not all, designated uses are attained and none are threatened. Attainment status of the remaining designated uses is unknown because data are insufficient to categorize a water body consistent with the state's listing methodology.

Category 3 consists of 1427 water body segments for which there are insufficient or no data and information to determine, consistent with the state's listing methodology, if any designated use is impaired or attained.

Category 4 consists of 75 water body segments for which one or more designated uses are impaired or threatened but establishment of a TMDL is not required.

Category 5 consists of 259 water body segments for which one or more pollutants has caused, is suspected of causing, or is projected to cause an impairment or threat of

impairment of one or more designated uses and the establishment of a TMDL is required. This category also includes those segments for which impairment is indicated, but the cause or source is unknown and segments for which the impairment is to a presumed use. In total this category contains 458 impairments (water body pollutant combinations).

The state's IR format includes sub-categories within Category 4. Only water body segments within Category 5 are subject to EPA approval. The 1708 water body segments listed within Categories 2 and 3 served to support EPA's evaluation of NDEQ's data assessment process and its determination whether all water quality-limited segments were listed by NDEQ in Category 5.

The state's IR format also incorporates an expansion of Category 4 into four sub-categories. Sub-category 4a includes waters that are threatened or impaired, but for which a TMDL has been completed and approved. Sub-category 4b includes waters that are threatened or impaired, but for which "other required control measures are expected to result in the attainment of water quality standards." Sub-category 4c includes waters where the "threat or impairment is not caused by a pollutant." Sub-category 4r includes lakes that are impaired for nutrient assessments but are newly filled or for which renovation has been completed and the lake is undergoing stabilization. Nebraska's methodology limits the time period for Category 4r to eight years, after which these water bodies will be assessed by the same methods as all other lakes. Sub-categories 4a through 4c are recognized within EPA guidance for the development of an integrated report. However, sub-category 4r constitutes a variation on EPA guidance. EPA's review of the state categories and sub-categories was conducted within the context of whether or not a water body segment should be listed within Category 5 based on existing and readily available data and information.

B. Nebraska's 2010 Methodology

NDEQ uses its "Methodologies for Water Body Assessments and Development of the 2010 Integrated Report for Nebraska" (July 2009), to evaluate "existing and readily available water quality-related data and information" (40 CFR § 130.7(b)(5)) and identify "water quality-limited segments still requiring TMDLs" (40 CFR § 130.7(a)). As described above, Category 5 of the 2010 list constitutes Nebraska's list of impaired waters for purposes of CWA Section 303(d) and is subject to EPA review and approval. EPA is taking action only on Category 5 which consists of water quality-limited segments still requiring TMDLs.

Changes in NDEQ's methodology include: 1) implementing a policy of including a comment in cases where data used for assessment was collected under high flow conditions and, 2) initiating a trend analysis for at least two sites per basin to identify waters of concern.

Exceptions to EPA approved WQS made in listing methodology are not approved for CWA purposes. EPA reviews, but does not approve, a state's listing methodology; EPA reviews and acts upon a state's 303(d) submittal based on the state's EPA approved WQS, rather than its listing methodology.

According to the state's listing methodology, data sources used to assess water quality conditions in Nebraska for purposes of Section 305(b) reporting and to aid in developing the state's 303(d) list include:

- (1) Waters included on the most recently approved state Section 303(d) list;
- (2) Waters included in the most recent Section 305(b) report as threatened, partially meeting or not meeting a designated use;
- (3) Waters for which dilution calculations or predictive models indicate non-attainment of applicable WQS;
- (4) Waters where effluent toxicity tests indicate a potential or actual exceedance of applicable WQS;
- (5) Waters where water quality problems have been reported by local, state, or federal agencies, the public or academic institutions;
- (6) Nonpoint source assessments reported to EPA under CWA Section 319 or any updates to such assessments;
- (7) Waters monitored within nonpoint source priority watersheds;
- (8) Drinking water sources water assessments under the Safe Drinking Water Act Section 1453;
- (9) Streams monitored under the NDEQ Basin Rotation Monitoring Program;
- (10) Waters where repeated fish kills have occurred or where abnormalities have been observed in fish or other aquatic life;
- (11) Streams monitored under the NDEQ Ambient Stream Monitoring Program;
- (12) Waters monitored under Nebraska's Fish Tissue Monitoring Program;
- (13) Lakes monitored under NDEQ's Statewide Lake and Reservoir Monitoring Program, and,
- (14) Waters monitored within Nebraska by the United States Geological Survey, Academic Institutions, United States Fish and Wildlife Service (FWS), United States Environmental Protection Agency, United States Army Corps of Engineers, Nebraska Game and Parks Commission, Nebraska Division of Health and Human Services System and Nebraska's 23 Natural Resource Districts.

C. Coordination with Other States on the Boundary Waters

EPA's Guidance for 2006 Assessment, Listing and Reporting Requirements Pursuant to Sections 303(d), 305(b) and 314 of the Clean Water Act contains recommendations on how states should handle shared waters with regard to the sharing of water quality data, assessment decisions for those shared waters, and accounting for the listing decision inconsistencies between states. The guidance further recommends that EPA Regional offices and Interstate Commissions, where applicable, should assist in resolving inconsistencies among states with shared waters, where they arise.

NDEQ's 2010 assessment methodology specifically addresses NDEQ's coordination efforts with other state agencies regarding listing of waters flowing into the state or from the state to "an area controlled by another state or tribe." NDEQ forwards draft IRs and requests comments from those jurisdictions. Comments are evaluated and modifications to the list are made, where appropriate.

IV. EPA Analysis of Nebraska's Approach to Listing Waters for the 2010 List

EPA is approving Nebraska's 2010 CWA Section 303(d) list, based on the requirements of Section 303(d) of the CWA and 40 CFR § 130.7. EPA's action is based on its analysis of whether NDEQ reasonably identified all water quality-limited segments requiring listing. In determining whether NDEQ reasonably identified all water quality-limited segments still needing a TMDL, EPA first looked at NDEQ's use support determinations as documented in the state's submittal.

NDEQ's 2010 assessment methodology identifies a general "cutoff date" as December 31, 2008, for data collection in support of NDEQ's water quality data assessment. EPA guidance recognizes the appropriateness of a reasonable data collection cutoff date allowing states to initiate actual data assessment and list preparation. Data not considered for the 2010 assessment should be considered for the 2012 submission. Despite the application of a "cutoff date" by NDEQ for the development of the 2010 list, NDEQ considered data submitted as part of the state's public notice and comment period starting February 4, 2010 and ending March 8, 2010. EPA believes NDEQ complied with the requirements of federal regulations at 40 CFR § 130.7(b)(5) regarding the assembly and evaluation of all existing and readily available water quality-related data and information.

The 2010 assessment methodology also discusses NDEQ's treatment of water quality-related data collected more than five years prior to the current assessment period. Federal regulations and guidance recognize that, in some instances, older data might not reflect current water quality conditions. Where the state demonstrates "good cause" for not including older data in the derivation of its list, federal regulations at 40 CFR § 130.7(b)(6)(iv) provide for the state not including a water or waters on its list. However, a demonstration of "good cause" relies on the state showing that there are changes in condition in the watershed or water body which result in older data not being representative of current water quality status. Also, Nebraska's methodology states a listed water body will not be removed from the state's Section 303(d) list simply because the data upon which the impairment was based have aged beyond five years.

To confirm that Nebraska's CWA Section 303(d) list was developed in a manner compliant with the requirements at 40 CFR Part 130.7 (regarding the assembly and evaluation of "all existing and readily available water quality-related data and information"), EPA reviewed the information contained in NDEQ's submittal for all waters listed in Nebraska's Integrated Report Category 5, and all waters proposed for delisting.

V. EPA Analysis of NDEQ Changes to the State's CWA Section 303(d) List

EPA compared waters listed in Category 5 of the state's 2008 IR with waters listed in Category 5 of the state's 2010 IR to determine whether waters were removed from the list, pollutants identified as causing impairment were changed, or water body descriptions had changed. In each case, such changes could constitute a change to the state's CWA Section 303(d) list requiring EPA approval. As described earlier in this document, Nebraska's 2010 CWA Section 303(d) list is a part of the state's IR. The IR format is consistent with EPA guidance and includes five categories of waters. Category 5 of the state's IR constitutes the state's 2010 CWA Section 303(d) list.

In its review of the state's 2010 list, EPA has reviewed Nebraska's description of the data and information the state relied upon in developing its list, its methodology for identifying water bodies and NDEQ's responses to public comment. In accordance with 40 CFR § 130.7(d)(2), EPA is approving Nebraska's 2010 CWA Section 303(d) list (Category 5 of its 2010 IR), consisting of a total of 260 water bodies with 459 water body / pollutant combinations.

Waters proposed by NDEQ for exclusion from Category 5 of Nebraska's 2010 CWA Section 303(d) list or for changes in its listing status which could be considered as a change to the CWA Section 303(d) list (e.g., segment description changed, listed causal pollutant changed) are identified below.

As a result of NDEQ's changes to the list of water bodies which were modified or removed from Nebraska's CWA Section 303(d) list, EPA initiated its review of 80 water bodies to determine whether NDEQ had "good cause" for modifying or not including these waters on its 2010 CWA Section 303(d) list.

A. Waters Removed by NDEQ from Nebraska's CWA Section 303(d) List and Approved by EPA

EPA is approving the modification to or removal of 35 water bodies and impairments from 80 water bodies from the state's CWA Section 303(d) list consistent with the requirements of federal regulations at 40 CFR § 130.7(b)(6)(iv). Section 40 CFR § 130.7(b)(6)(iv) provides for the exclusion of waters from the state's CWA Section 303(d) list. These regulations require that the state "demonstrate good cause for not including water or waters on the list. The reasons for each delisting were included in the submittal, and additional details were provided to EPA in the form of a responsiveness summary prior to the final Section 303(d) list submittal. The following are the general reasons cited for removal of water bodies from the Section 303(d) list:

- TMDLs or other pollution control requirements have been prepared for the 303(d) listed segment.
- Recent data collected from a 303(d) listed segment indicated that a listed pollutant is no longer a potential cause of water quality impairment.
- Changes in water quality standards and/or assessment methods resulted in changes in the use support status of listing segments.
- The state review identified flaws in original listings, attributable to errors associated with segment identifiers, or the use of inapplicable criteria.

The rationale supporting the removal of impairments from these 80 waters from the state's list can be grouped into four general categories and are also identified below. In some cases water body pollutant (causes) combinations may be delisted for reasons relating to more than one category for different causes. In these cases water body segments may be found in more than one of the sections which follow.

1. Waters with Approved TMDLs or other pollution control requirements (42 waters)

Forty two water bodies had impairments removed from the state's list because TMDLs or other pollution control requirements have been developed for those waters and approved by EPA. In each instance, a TMDL or other pollution control requirement has been developed for the listed pollutant or condition, or NDEQ and EPA have agreed that the submittal will address the listed pollutant or condition. For some waters, they continue to be listed in Nebraska's Category 5 for another pollutant or condition, or they are listed in another category within Nebraska's IR based on other water quality data. These waters are included in Table 1 with information regarding each TMDL described in the last column. Each water body and the rationale for moving it from Category 5 are listed below.

Big Blue River (NE-BB1-10000) Nebraska submitted and EPA approved on March 24, 2005, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Big Blue River (NE-BB1-10000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the cause atrazine and is newly listed for the cause fish consumption advisory.

Big Blue River (NE-BB1-20000) Nebraska submitted and EPA approved on March 24, 2005, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Big Blue River (NE-BB1-20000) to Category 4a for the *E. coli* cause. The water has been added to Category 5 as impaired for an unknown cause in 2010.

Big Indian Lake (11A) (NE-BB1-L0030) Nebraska submitted and EPA approved on September 29, 2009, a TMDL to address the causes of Total Phosphorus, Total Nitrogen, Chlorophyll *a* and sediment. As a result of that approval Nebraska moved Big Indian Lake (NE-BB1-L0030) to Category 4a for those causes.

West Fork Big Blue River (NE-BB3-10000) Nebraska submitted and EPA approved on March 24, 2005, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska

moved West Fork Big Blue River (NE-BB3-10000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the causes atrazine and selenium.

Elkhorn River (NE-EL1-10000) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Elkhorn River (NE-EL1-10000) to Category 4a for the *E. coli* cause. Nebraska has also provided documentation that the selenium exceedance of WQS is due to a natural condition. As a result Elkhorn River (NE-EL1-10000) is being moved to Category 4c for the selenium cause. The water body remains in Category 5 for the cause fish consumption advisory.

Maple Creek (NE-EL1-10900) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Maple Creek (NE-EL1-10900) to Category 4a for the *E. coli* cause. Nebraska has also provided documentation that the selenium exceedance of WQS is due to a natural condition. As a result Maple Creek (NE-EL1-10900) is being moved to Category 4c for the selenium cause. The water body remains in Category 5 for the cause biological integrity.

Elkhorn River (NE-EL1-20000) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Elkhorn River (NE-EL1-20000) to Category 4a for the *E. coli* cause. Nebraska has also provided documentation that the selenium exceedance of WQS is due to a natural condition. As a result Elkhorn River (NE-EL1-10000) is being moved to Category 4c for the selenium cause. This water is no longer on the state's 303(d) List.

Pebble Creek (NE-EL1-20100) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Pebble Creek (NE-EL1-20100) to Category 4a for the *E. coli* cause. Nebraska has also provided documentation that the selenium exceedance of WQS is due to a natural condition. As a result Pebble Creek (NE-EL1-20100) is being moved to Category 4c for the selenium cause. The water has been added to Category 5 as impaired for a biological integrity cause in 2010.

Logan Creek (NE-EL2-10000) Nebraska has provided documentation that the selenium exceedance of WQS is due to a natural condition. As a result Logan Creek (NE-EL2-10000) is being moved to Category 4c for the selenium cause. The water remains in Category 5 for the cause fish consumption advisory.

North Fork Elkhorn River (NE-EL3-20000) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved North Fork Elkhorn River (NE-EL3-20000) to Category 4a for the *E. coli* cause. Nebraska has also provided documentation that the selenium exceedance of WQS is due to a natural condition. As a result Elkhorn River (NE-EL3-20000) is being moved to Category 4c for the selenium cause. This water is no longer on the state's 303(d) List.

Elkhorn River (NE-EL4-10000) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Elkhorn River (NE-EL4-10000) to Category 4a for the *E. coli* cause.

Elkhorn River (NE-EL4-20000) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Elkhorn River (NE-EL4-20000) to Category 4a for the *E. coli* cause.

Elkhorn River (NE-EL4-30000) Nebraska submitted and EPA approved on September 29, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Elkhorn River (NE-EL4-30000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the cause fish consumption advisory.

Little Blue River (NE-LB1-10000) Nebraska submitted and EPA approved on March 24, 2005, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Little Blue River (NE-LB1-10000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for an atrazine impairment of its drinking water use.

Little Blue River (NE-LB2-10000) Nebraska submitted and EPA approved on March 24, 2005, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Little Blue River (NE-LB1-10000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for an atrazine impairment of its aquatic life use.

Platte River (NE-LP1-10000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Platte River (NE-LP1-10000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for selenium, atrazine and high pH.

Zwiebel Creek (NE-LP1-10400) Nebraska submitted with its IR a rationale for a permit in lieu of a TMDL to address the cause pH. For the limited purpose of taking action on the state's 2010 IR, EPA has reviewed the state's rational for listing Zwiebel Creek in Category 4b based on the permit in lieu of a TMDL and has determined that the permit will address the pH impairment by a date certain. EPA approves moving the water body from Category 5 to Category 4b for the cause pH.

Platte River (NE-LP1-20000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Platte River (NE-LP1-20000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for atrazine and fish consumption causes.

Shell Creek (NE-LP1-20700) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for atrazine. As a result of that approval Nebraska moved Shell Creek (NE-LP1-20700) to Category 4a for the atrazine cause. The water body remains in Category 5 for selenium.

Salt Creek (NE-LP2-10000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Shell Creek (NE-LP2-10000) to Category 4a for the *E. coli* cause. The water body remains in

Category 5 for the cause fish consumption advisory and is newly listed for the cause chloride.

Wahoo Creek (NE-LP2-10100) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Wahoo Creek (NE-LP2-10100) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the cause selenium.

Salt Creek (NE-LP2-20000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Shell Creek (NE-LP2-20000) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the cause fish consumption advisory, biological integrity and ammonia. The water body is newly listed for the cause chloride.

Antelope Creek (NE-LP2-20900) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria and ammonia. As a result of that approval Nebraska moved Antelope Creek (NE-LP2-20900) to Category 4a for the *E. coli* and ammonia cause. The water body remains in Category 5 for the cause selenium, copper and conductivity. The water body is newly listed for the cause chloride.

Papillion Creek (NE-MT1-10100) Nebraska submitted and EPA approved on September 30, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Papillion Creek (NE-MT1-10100) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the cause selenium and fish consumption.

Big Papillion Creek (NE-MT1-10110) Nebraska submitted and EPA approved on September 30, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Big Papillion Creek (NE-MT1-10110) to Category 4a for the *E. coli* cause.

Little Papillion Creek (NE-MT1-10111) Nebraska submitted and EPA approved on September 30, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Little Papillion Creek (NE-MT1-10111) to Category 4a for the *E. coli* cause.

Cole Creek (NE-MT1-10111.1) Nebraska submitted and EPA approved on September 30, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Cole Creek (NE-MT1-10111.1) to Category 4a for the *E. coli* cause. The water body remains in Category 5 for the cause low dissolved oxygen.

Big Papillion Creek (NE-MT1-10120) Nebraska submitted and EPA approved on September 30, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Big Papillion Creek (NE-MT1-10120) to Category 4a for the *E. coli* cause.

Papillion Creek (NE-MT1-10200) Nebraska submitted and EPA approved on September 30, 2009, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Papillion Creek (NE-MT1-10200) to Category 4a for the *E. coli* cause.

Carter Lake (NE-MT1-L0090) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for nutrients algae and turbidity. As a result of that approval Nebraska moved Carter Lake (NE-MT1-L0090) to Category 4a for the algal toxins and chlorophyll causes. The water body is still in Category 5 for the cause fish consumption advisory.

Glenn Cunningham Lake (Site No. 11) (NE_MT1-L0120) Nebraska submitted information that this water body has been renovated and is being placed into Category 4r while the lake equilibrates. This is a temporary category and the water will be assessed after the renovation and equilibration has been completed. The water body is now in Category 4r for the cause dissolved oxygen.

Missouri River (NE-NE1-10000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Missouri River (NE-NE1-10000) to Category 4a for the *E. coli* cause. The water body is still in Category 5 for the cause fish consumption advisory.

Big Nemaha River (NE-NE2-10000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Big Nemaha River (NE-NE2-10000) to Category 4a for the *E. coli* cause. The water body is still in Category 5 for the cause biological integrity.

North Fork Big Nemaha River (NE-NE2-12500) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved North Fork Big Nemaha River (NE-NE2-12500) to Category 4a for the *E. coli* cause. The water body is still in Category 5 for the cause biological integrity.

Iron Horse Trail Lake (WMA) (NE-NE2-L0090) Nebraska submitted and EPA approved on January 11, 2006, a TMDL for phosphorus and sediment. As a result of that approval Nebraska moved Iron Horse Trail Lake (NE-NE2-L0090) to Category 4a for the cause sediment. The water body is still in Category 5 for the causes fish consumption advisory, algal toxins and chlorophyll. The water body is also newly listed for the cause total nitrogen.

Round Lake (NE-NI3-L0370) Nebraska submitted a rationale with its 2010 IR which supported that the conductivity cause was the result of a natural background condition. As a result Nebraska has moved this water body to Category 4c for the cause conductivity.

Little Nemaha River (NE-NE3-10000) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Little Nemaha River (NE-NE3-10000) to Category 4a for the *E. coli* cause. The water body is still in Category 5 for the cause fish consumption advisory.

Lake Ogallala (NE-NP1-L0030) Nebraska submitted and EPA approved on September 28, 2007, a TMDL for dissolved oxygen. As a result of that approval Nebraska moved Lake Ogallala (NE-NP1-L0030) to Category 4a for the cause dissolved

oxygen. The water body has also been renovated and placed in Category 4r for the cause chlorophyll *a*.

Goose Creek Lake (Crescent NWR)(NE-NP2-L0180) Nebraska submitted a rationale with its 2010 IR which supported that the conductivity cause was the result of a natural background condition. As a result Nebraska has moved this water body to Category 4c for the cause conductivity.

Tree Claim Lake (Crescent NWR)(NE-NP2-L0270) Nebraska submitted a rationale with its 2010 IR which supported that the conductivity cause was the result of a natural background condition. As a result Nebraska has moved this water body to Category 4c for the cause conductivity.

North Platte River (NE-NP3-10000) Nebraska submitted and EPA approved on October 17, 2003, a TMDL for fecal coliform bacteria. As a result of that approval Nebraska moved North Platte River (NE-NP3-10000) to Category 4a for the *E. coli* cause. The water body is still in Category 5 for the cause fish consumption advisory.

Republican River (NE-RE3-10000) Nebraska submitted and EPA approved on March 24, 2005, a TMDL for *E. coli* bacteria. As a result of that approval Nebraska moved Republican River (NE-RE3-10000) to Category 4a for the *E. coli* cause. The water body is still in Category 5 for the cause selenium.

2. New Data Supports Change in Listing (16 waters)

a. New Water Quality Data (13 waters)

Thirteen water body segments are being removed from the state list based on new water quality data which indicates the use is supported with regard to the previously specified pollutants:

Cub Creek Lake (NE-BB1-L0080) The application of Nebraska's nutrient targets and sampling requirements indicate this lake is meeting assessment targets for chlorophyll *a*. As such this water body is being restored for the cause chlorophyll *a*. The water body remains in Category 5 for the causes *E. coli* and total phosphorus.

Swan Creek Lake (5A) (NE-BB2-L0020) Monitoring samples taken in Swan Creek Lake exceeded the numeric target of 20 micrograms per liter (µg/L) of algal toxins only three times in the last three years and only once in the last two years. Three samples of 49 do not rise to the statistical level to indicate impairment for the cause algal toxins. This water body remains in Category 5 for total nitrogen, total phosphorus, chlorophyll *a* and high pH.

West Fork Big Blue River (NE-BB3-10000) Fish tissue monitoring show mercury and trans-nonachlor levels have fallen below the criteria used to assess impairment. Nebraska is delisting the fish advisory cause and identifying this cause as restored. The water body remains in Category 5 for the causes atrazine and selenium.

Recharge Lake (NE-BB3-L0080) New monitoring data shows no atrazine samples exceeding either the drinking water criterion of 3 µg/L nor the chronic aquatic life criterion of 12 µg/L. Two seasonal samples in 2002 were above both criteria however, two samples of 27 do not rise to the statistical level to indicate impairment based on the Nebraska listing methodology. The water body remains in Category 5 for the causes total nitrogen, chlorophyll and total phosphorus. The water body is also newly listed for the cause fish consumption advisory.

Big Blue River (NE-BB4-20000) Monitoring data for 2007 shows only two atrazine samples exceeded the chronic aquatic life criterion of 12 µg/L of the 21 samples collected over the course of the calendar year. While these two samples occurred during the spring runoff period, two samples exceeding do not rise to the statistical level to indicate impairment based on Nebraska's listing methodology. This water remains in Category 5 for the cause *E. coli*.

Bates Branch (NE-LP2-20612) Monitoring data shows both fish and invertebrate scores rated as fair. Nebraska is delisting the biological integrity cause and indentifying this water as restored. This water is now listed in Category 2 of the Nebraska IR.

Elwood Reservoir (NE-MP2-L0540) Fish tissue monitoring show mercury levels have fallen below the criterion used to assess impairment. Nebraska is delisting the fish advisory cause and identifying this cause as restored. This water is now listed in Category 1 of the Nebraska IR.

Carter Lake (Omaha) (NE-MT1-L0090) Monitoring data for the assessment period 2002 through 2006 show four samples exceeding the numeric criterion for pH. Four samples from a total of 34 measurements do not rise to the statistical level to indicate impairment based on Nebraska's listing methodology. This water is still in Category 5 for the cause fish consumption advisory.

Wirth Brothers Lake (Site 27) (NE-NE3-L0045) Monitoring data for neither 2007 nor 2008 measured a geometric mean greater than the Nebraska WQS for *E. coli*. Nebraska is delisting this water body and placing it into Category 1 as supporting all its designated beneficial uses.

North Platte River (NE-NP2-10000) Fish tissue monitoring show mercury levels have fallen below the criterion used to assess impairment. Nebraska is delisting the fish advisory cause and identifying this cause as restored. This water is now listed in Category 4a of the Nebraska IR based on an EPA approved *E. coli* TMDL.

South Platte River (NE-SP1-50000) Fish tissue monitoring show mercury and selenium levels have fallen below the criteria used to assess impairment. Nebraska is delisting the fish advisory cause and identifying this cause as restored. This water is now listed in Category 2 of the Nebraska IR.

Birdwood Lake (WMA) (NE-SP1-L0030) Fish tissue monitoring show mercury levels have fallen below the criterion used to assess impairment. Nebraska is delisting the fish

advisory cause and identifying this cause as restored. This water is now listed in Category 2 of the Nebraska IR.

Sutherland Reservoir (NE-SP1-L0080) Fish tissue monitoring show mercury levels have fallen below the criterion used to assess impairment. Nebraska is delisting the fish advisory cause and identifying this cause as restored. This water is now listed in Category 1 of the Nebraska IR.

b. New biological monitoring data (3 waters)

Three stream segments are being removed from the state's 303(d) list as a result of additional data gathering or analysis which was conducted by NDEQ from 2004 through 2006:

Clearwater Creek (NE-EL4-20300) A review of hydrological data collected along with biological samples indicated that Clearwater Creek had undergone an extreme hydrological event preceding the collection of fish and invertebrate samples. In accordance with the Nebraska listing methodology's method of evaluating biological samples to address the Nebraska narrative WQS the impacted samples are not statistically valid to assess the biological community. As such this water body is being delisted for the cause biological integrity and being placed in Category 2 of the Nebraska IR.

Wahoo Creek (NE-LP2-10100) Monitoring data from 2004 shows both fish and invertebrate scores rated as good. Nebraska is delisting the biological integrity cause and identifying this cause as restored. This water body remains in Category 5 of the Nebraska IR for the cause selenium.

Bates Branch (NE-LP2-20612) Based on newly collected biological samples this water is meeting WQS for the cause biological integrity. As such this water body is being delisted for the cause biological integrity and being placed in Category 2 of the Nebraska IR.

3. Change in Assessment Methodology (11 waters)

Eleven previously impaired water body segment/pollutant combinations were delisted based on a change in NDEQ's listing methodology. NDEQ has instituted numeric translators to address narrative nutrient standards. As explained in the listing methodology Nebraska will list lakes as impaired for total nitrogen, total phosphorus and/or chlorophyll when the average of two or more years of data in which there are at least ten samples (preferably five samples in each year) exceed the target concentrations. EPA is acting on these listings as numeric translators to narrative standards and by this action does not indicate that these target concentrations are or are not acceptable as WQS. Any decision on the approvability of WQS is made in response to an official submittal of a specific WQS package to EPA. In cases where waters or pollutants were removed from Category 5 of the IR based on limited data, EPA would expect that the state would prioritize the collection of additional data in its monitoring program in order to make an assessment on the status of these lakes.

Bear Creek Lake (NE-BB1-L0065) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. This water is now listed in Category 2 of the Nebraska IR.

Cub Creek Lake (NE-BB1-L0080) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause total nitrogen. As such this water body is being delisted for the cause total nitrogen. The water body remains in Category 5 for the causes *E. coli* and total phosphorus.

Swan Creek Lake (2A) (NE-BB2-L0010) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. The water body remains in Category 5 for the cause low dissolved oxygen.

Overton Lake (NE-EL4-L0090) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. This water is now listed in Category 2 of the Nebraska IR.

Jeffery Reservoir (NE-MP2-L0710) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. This water is now listed in Category 2 of the Nebraska IR.

Prairie Owl Lake (NE-NE3-L0030) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. The water is now listed in Category 5 for the cause total phosphorus.

Merritt Reservoir (NE-NI3-L0330) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. The water body remains in Category 5 for the causes fish consumption and high pH.

Kilpatrick Lake (NE-NI4-L0090) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. The water body remains in Category 5 for the cause high pH.

Whitney Reservoir (NE-WH1-L0060) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. This water is now listed in Category 2 of the Nebraska IR.

Boardgate Pond (NE-WH1-L0180) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*.

As such this water body is being delisted for the cause chlorophyll *a*. The water body remains in Category 5 for the cause high pH.

Agate Pond (NE-WH2-L0020) The application of Nebraska's nutrient targets and sampling requirements indicate this lake cannot be assessed for the cause chlorophyll *a*. As such this water body is being delisted for the cause chlorophyll *a*. The water body remains in Category 5 for the cause high pH.

4. Error in Original Assessment (11 waters)

Waters identified in this section were listed based on an error in assessment.

Clearwater Creek (NE-EL4-20300) Review of biological monitoring data indicated that the samples were taken after an extreme hydrological event. As such the results are not valid for assessment of the biological community. The water is now in Category 2 of the Nebraska IR.

Salt Creek (NE-LP2-10000) Review of monitoring data indicates the water body meets WQS. Only one sample exceeded the pH criteria since 2001, as such this water body should not have been listed as impaired for the cause pH. This water remains in Category 5 for the causes fish consumption advisory and chloride.

Clear Creek (NE-MP1-10100) Monitoring data for pH does not indicate an exceedance of WQS for pH has occurred. This water remains in Category 5 for the causes *E. coli* and temperature.

Iron Horse Trail Lake (WMA) (NE-NE2-L0090) Monitoring data for pH does not indicate an exceedance of WQS for pH has occurred. This water remains in Category 5 for chlorophyll *a*, total nitrogen, algal toxins and a fish consumption advisory.

Dewey Lake (Valentine NWR) (NE-NI3-L0240) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body is now in Category 2 of the state's 2010IR.

Round Lake (NE-NI3-L0370) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body remains in Category 4c for the cause conductivity.

Crane Lake (Crescent NWR)(NE-NP2-L0090) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body is now in Category 2 of the state's 2010IR.

Hackberry Lake (Crescent NWR)(NE-NP2-L0100) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body is now in Category 2 of the state's 2010IR.

Roundup Lake (Crescent NWR)(NE-NP2-L0130) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body is now in Category 2 of the state's 2010IR.

Tree Claim Lake (Crescent Lake NWR)(NE-NP2-L0270) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body is now in Category 4c for the cause conductivity.

Border Lake (Crescent NWR)(NE-NP2-L0300) Nebraska has delisted the pH impairment based on its WQS exception where high pH is the result of a natural background condition. The water body is now in Category 5 for the causes conductivity and dissolved oxygen.

EPA concludes that the state properly assembled and considered all existing and readily available data and information for the water bodies identified above proposed for delisting, including all of the existing and readily available data and information relating to the categories of waters specified in 40 CFR § 130.7(b)(5). Therefore, EPA concludes that the state's decision to delist the above waters identified in its listing submittal are consistent with federal listing requirements.

VI. Priority Ranking in Nebraska's CWA Section 303(d) List

NDEQ's listing methodology describes how the state will prioritize water bodies for purposes of establishing TMDLs. Nebraska's prioritization of impaired waters for TMDL completion will be based on the availability of data, complexity of the problem, sources of impairment and other relevant factors. Where data is lacking, priorities are assigned in part based on the rotational basin, Section 319 priorities and NPDES/permitting priorities.

VII. Nebraska's Public Participation Process

NDEQ public noticed its 2010 draft CWA Section 303(d) List from February 4, 2010 to March 8, 2010; this included notice of the availability of the draft IR published on February 4, 2010 in seven newspapers throughout the state. The list was made available for public review and comment through the NDEQ website. NDEQ received comments from EPA and the FWS. EPA's comment letter outlined the information expected from the state for a complete submittal of its Section 303(d) List. Comments from the FWS expressed concern with the use of the nutrient targets used to address narrative WQS, the failure to assess lakes in the Sand Hills region of Nebraska for nutrients, the applicability of the aquatic life chronic atrazine criterion and the failure to list wetlands based on data supplied by the FWS showing an exceedance of the Nebraska WQS. EPA has reviewed these comments and agrees with the actions taken or not taken by the state. In the case of the atrazine listings based on FWS data, the necessary quality control/quality assurance (QA/QC) information was submitted outside the comment period by FWS. Failure to list these water bodies was consistent with the state's methodology. The state did provide the data and an explanation in an appendix to its IR submittal. While EPA agrees NDEQ followed its methodology not listing these water bodies, FWS has since supplied the required QA/QC information and EPA would expect for this information to be considered during

the 2012 IR cycle. These comments and Nebraska's response were included with the state's submittal.

EPA has reviewed Nebraska's public participation process and has concluded that the state provided adequate public notice and opportunity for the public to comment on its decision regarding the CWA Section 303(d) list in compliance with federal requirements.

Nebraska's 2010 303(d) List

Table 1 lists each modification or water body approved for the addition to, or removal from, the state's CWA Section 303(d) list and the supporting rationale for each. Table 2 identifies the Nebraska § 303 (d) list as approved by EPA. The following terms are used in the tables and defined below.

BB	Big Blue River Basin
EL	Elkhorn River Basin
LB	Little Blue River Basin
LO	Loup River Basin
LP	Lower Platte River Basin
MP	Middle Platte River Basin
MT	Missouri River Tributaries
NE	Nemaha River Basin
NI	Niobrara River Basin
NP	North Platte River Basin
RE	Republican River Basin
SP	South Platte River Basin
WH	White River – Hat Creek Basin

Table 1. Changes from Nebraska's 2008 CWA Section 303(d) List as Approved by EPA.

Water body name	WBID	2008 listed pollutant	2010 pollutant	Rationale for change
BIG BLUE RIVER	NE-BB1-10000	ATRAZINE	ATRAZINE	NO CHANGE
BIG BLUE RIVER	NE-BB1-10000		FISH CONSUMPTION ADVISORY	NEW IMPAIRMENT
BIG BLUE RIVER	NE-BB1-10000	E. COLI		DELIST - TMDL
MISSION CREEK	NE-BB1-10100		ATRAZINE	NEW IMPAIRMENT
MISSION CREEK	NE-BB1-10100		E. COLI	NEW IMPAIRMENT
BIG INDIAN CREEK	NE-BB1-10800	ATRAZINE	ATRAZINE	NO CHANGE
BIG INDIAN CREEK	NE-BB1-10800		E. COLI	NEW IMPAIRMENT
BIG INDIAN CREEK	NE-BB1-10900	ATRAZINE	ATRAZINE	NO CHANGE
BIG BLUE RIVER	NE-BB1-20000	ATRAZINE	ATRAZINE	NO CHANGE
BIG BLUE RIVER	NE-BB1-20000	SELENIUM	SELENIUM	NO CHANGE
BIG BLUE RIVER	NE-BB1-20000	E. COLI		DELIST - TMDL
BIG INDIAN LAKE (11A)	NE-BB1-L0030	TOTAL PHOSPHORUS		DELIST - TMDL
BIG INDIAN LAKE (11A)	NE-BB1-L0030	TOTAL NITROGEN		DELIST - TMDL
BIG INDIAN LAKE (11A)	NE-BB1-L0030	SEDIMENT		DELIST - TMDL
BIG INDIAN LAKE (11A)	NE-BB1-L0030	CHLOROPHYLL A		DELIST - TMDL
WOLF WILDCAT LAKE	NE-BB1-L0050	FISH CONSUMPTION ADVISORY	FISH CONSUMPTION ADVISORY	NO CHANGE
