

April 28, 2015

MEMORANDUM TO: Mark Henry Salley, Chief
Fire Research Branch
Division of Risk Analysis
Office of Nuclear Regulatory Research

FROM: Kendra L. Wright, Reliability and Risk Engineer */RA/*
Fire Research Branch
Division of Risk Analysis
Office of Nuclear Regulatory Research

SUBJECT: Notice of Nuclear Regulatory Commission - Office of
Nuclear Regulatory Research in cooperation with Electric
Power Research Institute (NRC-RES/EPRI) Dates and
Locations for Fire Probabilistic Risk Assessment Courses

DATE AND TIME: Module III Fire Analysis
Monday, July 20th through Friday, July 24th, 2015

Module V Advanced Fire Modeling
Monday August 17th through Friday, August 22nd, 2015

Module II Electrical Analysis
Monday, August 24th through Friday, August 28th, 2015

LOCATION: US NRC Headquarters
Professional Development Center (PDC)
11555 Rockville Pike
North Bethesda, Maryland 20852

DATE AND TIME: Module I PRA and Module IV HRA
Monday September 28 through Friday October 2nd, 2015

LOCATION: EPRI Charlotte Offices
1300 W W.T. Harris Blvd
Building 3 -741 A&D
Charlotte, NC 28262

CONTACT: Kendra L. Wright, RES/DRA
301-251-3300

PURPOSE: The U.S. Nuclear Regulatory Commission (NRC) Office of
Nuclear Regulatory Research (RES), in cooperation with
the Electric Power Research Institute (EPRI), will jointly
sponsor courses on fire probabilistic risk assessment
(PRA). Since 2002, RES and EPRI, under a Memorandum

of Understanding (MOU) on Cooperative Nuclear Safety Research, have been developing state-of-the-art methods for conducting a fire PRA. In September 2005, this work produced the “EPRI/NRC-RES Fire PRA Methodology for Nuclear Power Facilities,” i.e., EPRI 1011989, NUREG/CR-6850¹, which is the subject of this 2015 course.

Five individual modules will be offered covering the major technical areas of the fire PRA methodology. This year each module will be offered only one time at either the NRC or EPRI offices. Participants may attend as many modules as they wish during the year. The five technical area modules are described below:

Module 1: PRA - This module covers the technical tasks for development of the both system and operator response to a fire. Specifically, this module covers NUREG/CR-6850, EPRI 1011989 Volume 2, Sections 2, 4, 5, 7, 14, and 15. This module is suited for PRA practitioners responsible for the systems modeling aspects of the fire PRA. Specifically, participants in this module should possess the following knowledge:

- A general knowledge of PRA as applied to nuclear power plants, including typical approaches, modeling techniques (event trees, fault trees, interfaces between PRA and HRA), and the quantification of PRA models
- Some familiarity with plant systems typically found in nuclear power plants. A simplified, but reasonably realistic example of a few plant systems will be used to demonstrate the methodology.
- Some familiarity with piping and instrumentation diagrams (P&IDs) and their use in developing PRAs

Date and Location

Monday September 28 through Friday October 2nd, 2015

EPRI Charlotte Offices
1300 W W.T. Harris Blvd
Building 3 -741 A&D
Charlotte, NC 28262

¹ NUREG/CR-6850, EPRI 1011989 may be downloaded from NRC's public website at the following address: <http://www.nrc.gov/reading-rm/doc-collections/nuregs/contract/> or obtained from EPRI website at www.epri.com

Module 2: Electrical Analysis - This module covers technical tasks for analysis of fire induced circuit failures in support of fire PRA analysis. Specifically, this module covers NUREG/CR-6850, EPRI 1011989 Volume 2, Sections 3, 9, and 10. The electrical analysis module is geared toward PRA practitioners and fire safe shutdown analysts with a practical understanding of the concepts and methods of fire-induced circuit failure analysis within the context of fire PRA or Appendix R post-fire safe shutdown circuit failure assessments. Specifically, participants in this module should possess the following knowledge:

- General circuit design and operational control for typical plant equipment
- Basic circuit analysis techniques for identifying and classifying fire-induced circuit failure modes
- Working level knowledge of typical electrical drawings, including one-line diagrams, schematic diagrams, electrical block diagrams, wiring/connection diagrams, raceway layout drawings, instrument loop diagrams, etc.
- Cable and raceway, Appendix R post-fire safe shutdown, and fire PRA database structures and software
- Appendix R post-fire safe shutdown circuit analysis
- Progression of events stemming from the EPRI/NRC cable fire testing to characterize fire induced circuit failures (historical perspective)
- Emerging issues and challenges associated with the analysis of multiple spurious operations

Date and Location:

Monday, August 24th through Friday, August 28th, 2015

US NRC Headquarters
Professional Development Center (PDC)
11555 Rockville Pike
North Bethesda, Maryland 20852

Module 3: Fire Analysis - This module covers technical tasks involving plant partitioning, fire frequency analysis, and the development and analysis of fire scenarios from fire ignition to target impact and fire suppression. Specifically, this module covers NUREG/CR-6850, EPRI 1011989 Volume 2, Sections

1, 6, 8, and 11. This module is suited for PRA practitioners responsible for treating those aspects of the fire PRA specifically related to the fire growth and damage assessment tasks. Specifically, participants in this module should possess the following knowledge:

- A general understanding of the fire frequency calculation process as practiced in fire PRA,
- Knowledge of general fire protection features and systems as typically implemented at a NPP,
- A general understanding of how fire models are used in support of the fire PRA (a proficient level of fire modeling expertise is *not* required),
- A general understanding of fire behavior and the parameters most important to a fire growth and damage analysis (e.g., concepts such as fire spread, heat release rate (HRR), target response, and fire suppression and detection analyses).

Date and Location:

Monday, July 20th through Friday, July 24th, 2015

US NRC Headquarters
Professional Development Center (PDC)
11555 Rockville Pike
North Bethesda, Maryland 20852

Module 4: HRA - This module covers technical tasks related to modeling human failure events (i.e., the failure of operator responses) in a fire context. This module will focus on the guidance provided in NUREG-1921, "EPRI/NRC-RES Fire Human Reliability Analysis Guidelines" which largely replaces the human reliability analysis (HRA) guidance provided in EPRI 1011989, NUREG/CR-6850, Volume 2, Section 12. This module is suited for HRA/PRA practitioners responsible for the HRA aspects of the fire PRA. Specifically, participants in this module should possess the following knowledge:

- A general knowledge of PRA as applied to nuclear power plants, including typical approaches, modeling techniques (event trees, fault trees, interfaces between PRA and HRA), and the quantification of PRA models
- Some familiarity with plant systems typically found in nuclear power plants. Simplified, but reasonably realistic examples of plant systems that may be

represented in PRAs and manipulated by operators will be used to demonstrate the methodology.

- Some familiarity with plant operations and operating procedures. Examples of HRA tasks, such as human failure event identification, will use typical operator actions and simplified examples of operating procedures to demonstrate the methodology.
- A general understanding of the typical influences on operator performance and how they are represented in HRA tasks such as human failure event definition and quantification.

Date and Location:

Monday September 28 through Friday, October 2nd, 2015

EPRI Charlotte Offices
1300 W W.T. Harris Blvd
Building 3 -741 A&D
Charlotte, NC 28262

Module 5: Advanced Fire Modeling – The module covers the fundamentals of fire science, as well as the guidance for the use of fire models to evaluate fire generated conditions that may impact the nuclear plants safety functions and/or impair operator's ability to safely shutdown the plant after a fire. This module will use the EPRI 1019195, NUREG-1934, "Nuclear Power Plant Fire Modeling Application Guide." This module is suited for fire modeling practitioners. It is recommended that the participants complete Module 3, Fire Analysis, prior to taking this Module. Specifically, participants in this module should possess the following knowledge:

- General knowledge of the fire dynamics
- General knowledge of the behavior of compartment fires; and
- General knowledge of basic engineering principles, specifically thermodynamics, heat transfer, and fluid mechanics
- General knowledge of mathematical computer fire models

Date and Location:

Monday August 17th through Friday, August 22nd, 2015

US NRC Headquarters
Professional Development Center (PDC)
11555 Rockville Pike
North Bethesda, Maryland 20852

Please note:

Printed notebooks will **NOT** be provided this year.

Laptop computers on which the user has **administrative rights to add software** are **REQUIRED** for participation in Module 5 Advanced Fire Modeling.

While laptop computers are not required for participation in Modules 1-4, participants may wish to bring a laptop to follow along with the course materials electronically.

Slides and other required class material will be available on the web prior to the course for download. It is essential that each student have either an electronic copy (on their laptop) or a paper copy with them for the training. It is each attendee's responsibility to download and bring this material to the training.

It is recommended that participants read appropriate sections of NUREG/CR-6850 (EPRI 1011989) corresponding to the selected training module prior to the course. This report may be downloaded from NRC's public website at the following address: <http://www.nrc.gov/reading-rm/doc-collections/nuregs/contract/cr6850/> or obtained from EPRI website at www.epri.com.

Those interested in attending this workshop must register on the EPRI website using the links below.

REGISTRATION:

Module I – PRA

(Charlotte, NC - 9/28/2015 – 10/2/2015)

[EPRI/NRC-RES Fire Probabilistic Risk Assessment Training - Module I - Probabilistic Risk Assessment](#)

Module II – Electrical Analysis

(North Bethesda, MD – 8/24/2015 – 8/28/2015)

[EPRI/NRC-RES Fire Probabilistic Risk Assessment Training - Module II - Electrical Analysis](#)

Module III – Fire Analysis

(North Bethesda, MD – 7/20/2015 – 7/24/2015)

[EPRI/NRC-RES Fire Probabilistic Risk Assessment Training - Module III - Fire Analysis](#)

Module IV – HRA

(Charlotte, NC - 9/28/2015 – 10/2/2015)

[EPRI/NRC-RES Fire Probabilistic Risk Assessment Training - Module IV - Fire Human Reliability Analysis](#)

Module V – Advanced Fire Modeling

(North Bethesda, MD - 8/17/2015 – 8/22/2015)

[EPRI/NRC-RES Fire Probabilistic Risk Assessment Training - Module V - Advanced Fire Modeling](#)

Registration for this workshop is required to ensure space availability. If you have any questions, you may contact Ms. Wright at 301-251-3300.

CATEGORY: This meeting is a Category 3 meeting*. The public is invited to participate in this meeting by providing comments and asking questions throughout the meeting. Please note that this workshop is being conducted in a classroom format; registration is required to ensure space availability.

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in this workshop, or need the workshop notice or agenda in another format (e.g., Braille, large print), please notify the NRC's meeting contact. Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

*Meetings between the NRC technical staff and external stakeholders are open for interested members of the public, petitioners, interveners, or other parties to attend as observers pursuant to Commission policy statement, "Enhancing Public Participation in NRC Meetings," 67 *Federal Register* 36920, May 28, 2002.

NRC CONTACT: Kendra Wright, phone (301) 251-3300 or e-mail: Kendra.hill@nrc.gov
 EPRI CONTACT: Kris Vail, phone (704) 595-2617 or e-mail: kvail@contractor.epri.com
