## General Comment

The Everglades and Biscayne Bay are one of only one place like this all over the world. Though I realize the importance of the power needed I do think the Commission needs to look at the overall picture. Power is useless without drinkable water for the consumers. Though I am sure your researchers truly believe the plants will not harm anything I think in the overall picture from generations to come, even they don't have all the answers. Please consider the impacts carefully and make a choice that is right for people and the environment and not for power companies and profits. Thank you. Peggy Tingle
