comments: Nuclear Regulatory Commission at Turkey Point.

To whom it may concern,

I am sure that you are interested in hearing what the people of Florida think about the problem of providing electricity - presently and in the future- for the State. If so, please read the Op- Ed page in the Miami Herald edition of May 7th.

It is an excellent summary of the concerns that most of us have regarding the way Florida Power & Light has decided to resolve the problem. Other than the disposition of nuclear waste, the use of water by the plant that is located in a fragile ecological area, is something that should take priority in considering the licensing of the plant.

Living in the 'sunshine state' would it not make more sense to invest a fraction of the cost of a nuclear plant to develop solar power and other renewable sources? Costa Rica, a very small country but also with fewer economic resources than the U.S, just enjoyed one month without the need of power generated by fossil fuels. They are experimenting with renewable sources. Is there a lesson for us to learn?

Thank you very much for listening to one citizen.

I am sure that like me, there are millions that support the suggestions in the Herald's article.

Alejo Icaza
