Subject: Turkey Point Expansion

Hello,

I am an electrical engineering graduate student at FIU and I want to express my disapproval of the expansion of Turkey Point's Nuclear Generation.

FPL is pushing for this expansion because it will benefit their bottom line and rate payers are stuck with the bill. There are cheaper ways to increase our generation capacity and reduce our electrical consumption with energy efficiency upgrades which have been opposed by FPL because it would obviously take away from the kWh charged to customers.

If there is going to be a monopoly in our electrical system, then it must be forced to adopt the policies which benefit the most people (taking externalities into account). If not, open up the market and allow for PPAs, the absence of which is squashing solar power in the "Sunshine State".

The common person does not know about these policies and how they are being influenced by big money in order to maintain their high profits.

This is without even mentioning the environmental effects such an upgrade will do specifically concerning water supply and the danger of sea level rise.

Sincerely,
Ricardo de Azevedo
