**Subject:** Comment about The NRC Study & Findings of FPL Wanting 6 & 7 Nuclear Reactors

**I hope the you & your colleagues are un-biased & have enough integrity & complete enough with your science to come to the stronger conclusions against FPL wanting 6 & 7 Nuclear Reactors, because you have also factored in, along with Global Warming flooding where Turkey Point resulting in even greater damage to people's health & tourism, that:**

**When FPL (& the nuclear power industry) claims they are either 'Green' or Carbon Free or Low Carbon Foot Print they are lying,**

**Germany (The Western European country with the most cloud cover) that gets so much of the power from solar energy that they are decommissioning nuclear power plants, with the aim of having none. The information out there that Germany uses more International Corporations' Coal than they are using solar power (making the only way their program of providing mortgage type loans for all their home owners to have the chance to own & use solar panels is able to work) is also a lie. I have read & heard from sources (I trust) that the only reason they use non-solar power & wind energy is because they & The EU already had established trade deals, with other countries.**

**The very source of nuclear power has to be dug out of the ground, through huge mines & has to be transported over states to the nuclear power plants. As I believe PFL representatives said, not just the one time they start a new nuclear reactor or/and a nuclear power plant, but regularly to replace the spent source. Plus, since the nuclear waste that is created cannot be safety stored, the transporting & attempting to safely store the nuclear waste has a huge cost in terms of global warming & our world's environment.**
