U.S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, DC 20555-0001

Re: **Strata Energy Ross In Situ Recovery Project**  
**Source Materials License SUA-1601, Docket No. 040-09091**  
**Preoperational License Conditions 12.2 and 12.11(D)**

To Whom It May Concern:

**Preoperational License Condition 12.11(D)** of SUA-1601 requires the following:

*12.11 Prior to the preoperational inspection, the licensee will provide to the NRC written SOPs required for LC 10.4, which will include information to meet the following specific-site conditions:*

*D) An emergency response program that includes hazard assessment of all chemicals used at the facility including an accident analysis for those chemicals.*

Strata Energy Inc. (Strata) has completed the preparation of an Emergency Response Plan. Included as an appendix to this Plan is a Chemical Emergency Response Guide (CERG), which includes a hazard assessment for all chemicals that will be used at the facility. In accordance with discussions with Strata's Project Manager a copy of the Plan will be available on site for inspection. A copy of the Table of Contents is attached to this letter for information purposes.

**Preoperational License Condition 12.2** of SUA-1601 requires the following:

*12.2 Prior to commencement of operations, the licensee shall coordinate critical emergency response requirements with local authorities, fire department, medical facilities, and other emergency services. The licensee shall document these coordination activities and maintain such documentation on-site.*

With the completion of the Emergency Response Plan Strata has begun the coordination process with local emergency response officials. Strata will be submitting the plan for review and comments and has scheduled an initial meeting with Crook County Emergency officials. Strata has also begun attending

AX45  
N1M8801

meetings of the local Oshoto Volunteer Fire Department (VFD). As required in License Condition 12.2 these activities will be documented and maintained on site for inspection by NRC. Strata notes that coordination with emergency response officials is an ongoing process at most uranium recovery projects involving initial coordination and then periodic updates whenever changes are made to the facility or to inform new participants. As such this process does not have a completion date.

Strata requests that NRC staff verify that the provided information meets the requirements contained in License Conditions 12.2 and 12.11(D). Please contact me if you have any questions. You can reach me at (307) 686-4066 or [mgriffin@stratawyo.com](mailto:mgriffin@stratawyo.com).

Sincerely,

Strata Energy, Inc.

A handwritten signature in black ink, appearing to read 'M. Griffin', is written over the printed name and title.

Michael Griffin  
Vice President of Permitting, Regulatory and Environmental Compliance
