SUBJECT
Call to request clarification on exemption request for Oconee Nuclear Station (ONS) Independent Spent Fuel Storage Installation.

SUMMARY
NRC Participant: John Vera
ONS Participant: Stephen Newman

The NRC called ONS to clarify an exemption request dated August 28, 2014, pertaining to five dry shielded canisters (DSCs) for which the helium leak rate required by a Technical Specification could not be corroborated. NRC staff was unclear about which regulations the applicant was requesting exemption from, due to conflicting information in the request. ONS staff indicated they would review the request and confirm the applicable regulations with NRC staff, possibly as a clarification supplement to the exemption request.
