Subject: traditional and SI units suggestion
Date: Thursday, May 28, 2015 9:11:26 AM

This is for docket NRC-2009-0279

This is for using traditional and SI units for the regulations.

Some areas will be OK to use both at the same time with parenthesis, but especially appendix B tables will be difficult to put everything fit them in to one page. It would be better to use 2 different Appendix B for traditional and SI units rather than combined one Appendix with 2 units. If rather have tables with combined units, make each table separate such as Appendix B, table 1. Occupational value of ALI and DAC, Appendix B table 2 and 3, effluent concentration and sewer release.

Just thought.
