**RE: Strata Energy Inc. Ross ISR Project
License Number SUA-1601, Docket #40-9091
Additional Testing Plan**

Dear Ms. Chang:

On March 17, 2015, Strata Energy, Inc. submitted an Additional Testing Plan for certain sites within the Phase 1 boundary as required by Stipulation B.1.b of the Programmatic Agreement (PA) for the Ross ISR Project. By email dated April 22, 2015, the Nuclear Regulatory Commission (NRC) staff provided comments prepared by Staff and the Bureau of Land Management. Enclosed please find the following documents in response to these comments:

- A Revised Additional Testing Plan dated June 10, 2015 prepared by GCM Services that addresses the Staff comments;
- A summary of testing plan responses based on a similar summary provided by NRC staff; and
- Detailed responses to all NRC staff comments.

In addition as required by Stipulation B.1.a of the Ross PA, Strata's archeological consultant, GCM Services, completed recordation of four sites. Site forms were prepared for each site: one form is a revised/updated form, two are site forms that correspond to site numbers that never had completed forms prepared, and one is an isolated find form. These properties are associated with a Tribal Working Group (TWG) traditional cultural property (TCP) study at the Ross ISR site in 2013. The TWG identified these properties but never produced site records. NRC staff requested that Strata complete these forms as a follow-up to the TCP study. This was completed by GCM Services on April 21, 2015 and the site forms have been forwarded to the Wyoming SHPO.

In addition please find an affidavit executed by Ralph Knode, CEO of Strata Energy, Inc., requesting that the attached Additional Testing Plan be withheld from public disclosure as privileged and confidential information pursuant to 10 CFR § 2.390.

Ms. Lydia Chang
