Compliance with dose limits for individual members of the general public

We currently possess 6 Ronan SA-1 source holders; 3 containing 50mCi CS-137 and 3 containing 5mCi CS-137. The source holders are mounted to frames over an elevated conveyor approximately 20 feet above the floor. Due to the elevation and field reduction from the conveyor the radiation levels below the conveyor are less than 0.2mR/hr. The radiation levels at 2 inches from the devices containing 50mCi are less than 2mR/hr; 0.3mR/hr at 12". The radiation level on the 5mCi devices at 2 inches is less than 0.3mR/hr.

Our employees are adjacent to the devices once every 6 months to perform shutter checks. This operation takes approximately 10 minutes per device. Working at 12 inches from the devices it is unlikely that any employee would receive a dose in excess of 2mrem/hr or 50mrem per year. Ref: 10CFR20.1302 or agreement state equivalent.

Question #5 List of Gauges

Ľ

- 1) 0575GK SA8-F37 CS-137 50mCi
