ATTN: MATERIALS LICENSING

July 23<sup>rd</sup>, 2015

To Whom It May Concern,

We would greatly appreciate your consideration for amending our U.S. Nuclear Regulatory Commission license #13-32212-01 to add the following to our list of approved radionuclides;

1. Gallium-67; requested possession limit of 20 mCi
2. Gallium-68; requested possession limit of 20 mCi
3. Indium-111; requested possession limit of 20 mCi

The above three radioactive isotopes will be ordered from commercial suppliers. They will be utilized to label bioactive compounds generated at Endocyte within the designated Endocyte hot lab using standard chelating and analysis procedures. The labeled compounds will subsequently be administered into animals to determine tumor uptake and tissue biodistribution.

We appreciate your time in reviewing our request. Should you have any questions, please do not hesitate to contact me.

Sincerely yours,

Jonathan M. Shillingford, Ph.D.
