**Subject:** [External\_Sender] in situ leach uranium mine that is currently operating near Crawford, NE  
**Date:** Wednesday, August 19, 2015 7:59:52 PM

---

Regulations do not require off site water testing for uranium and other heavy metals associated with uranium ISL milling. Disinformation has caused the radioactive contamination to be normalized. A farming/ranching operation adjacent to Cameco Crow Butte Resources had to down crops due to air-born contamination from the mine, it is said there was a payout to cover the lost crop. PLEASE SAY **NO** TO THE RENEWAL OF THIS LICENSE!
