Subject: Oconee Nuclear Station
McGuire Nuclear Station
Docket Nos. 50-269, -270, -287; 50-369, -370

Dear Sir:

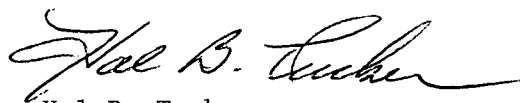

By letter dated October 26, 1982, the NRC forwarded Generic Letter 82-22, Congressional Request for Information Concerning Steam Generator Tube Integrity, and requested our response.

Over the past several years, Duke has provided to the NRC substantial information on both the Oconee and McGuire plants related to the operation and maintenance of steam generators. Duke has periodically provided technical information on steam generator operating history as initially requested by an NRC letter dated December 9, 1977 to all PWR facility licensees. Earlier this year, substantial technical information was provided to the NRC which was reflected in an earlier report to the Congress and in NUREG-0886, Steam Generator Tube Experience, February 1982. Furthermore, Duke meets the requirements of existing regulations dealing with operation of structures, systems, components that are safety related as well as the standards for protection against radiation. Permissible doses, levels, concentrations are not exceeded. The ALARA concept is followed. Reports are periodically provided on personnel monitoring as well as an annual statistical summary report on personnel monitoring.

Through these, and other activities, the NRC is knowledgeable of Duke's actions associated with the operation and maintenance of steam generators at our plants. This previously provided information should be used in responding to the Congressional request. Additional information, beyond that previously provided, would be time consuming to develop, would present an undue administrative burden to Duke.

Duke has operated and maintained our nuclear power plants fully within the requirements of the applicable rules and regulations, and will continue to do so.

Very truly yours,

Hal B. Tucker
