Subject: [External_Sender] Docket Nos. PRM-20-28, PRM-20-29, and PRM-20-30, NRC-2015-0057

Dear Secretary,

Dr John Gofman demonstrated over thirty years ago that low level radiation is hazardous, and even possibly, in a non linear way that makes low level radiation even more harmful than the linear model.

It is amazing that the NRC is still demonstrating that the organization is a handmaiden of the nuclear industry by considering the "Hormesis Theory" for possible implementation.

The NRC should reject the three petitions for rulemaking cited in the subject line out of hand. The agency should not even have accepted them for public comment in the first place, as they are frivolous and based on unsound science.

Any changes to radiation regulations contemplated by the NRC should be in the direction of strengthening, not weakening them.
