Linear No-Threshold Model and Standards for Protection Against Radiation

Comment on: NRC-2015-0057-0010

Linear No-Threshold Model and Standards for Protection Against Radiation; Notice of docketing and Request for Comment

Document: NRC-2015-0057-DRAFT-0118

Comment on FR Doc # 2015-15441

Submitter Information

Name: Dr. Lutz Niemann

General Comment

Four years after the Fukushima radiation protection experts have drawn in the German journal Radiation Protection Practice 1/2015 balance. "The German Federal Office for Radiation Protection." Switzerland since Trittin is under political line - This journal Radiation Protection Practice is the organ of the trade association Radiation Protection Germany. The journal Radiation Protection Practice 1/2015 provides an overview of the previously backed up available evidence of the consequences of the nuclear accident, and it is written that what is said preparations provoking worldwide. The main findings of the experts:

- 1 Fukushima was no radiological disaster. By the radiation, there were no deaths and no one was even in his health geschdigt radiation.
- 2 Fukushima was a much greere social catastrophe. The not required for radiological reasons but required by law evacuations had two ways fatalities result: There are some over 50 intensive care patients during the evacuation or equal died thereafter because their supply was interrupted. There are at the GSF also the message because among intensive care patients after evacuation something more about 100 old people died later, which is back on the transport and interruption of the supply to lead.

Among the years evacuated around 130 000 People there are plenty of problems, because you have taken them home: psychological stress, fear of radiation, uprooting, escape in alcohol, suicides. In other media casualties 500-3000 can be found.

The nonsensical regulations, several thousand people were driven to death. After the Chernobyl accident in 1991, the IAEA had evacuations and food restrictions criticized as going too far. It need the benefits and risks of all measures are weighed sensibly, however, it has not UNSCEAR the task to take care of social, emotional, psychological problems of the people, as it is written in the radiation protection practice. However, it is task of UNSCEAR and the other international bodies to replace the nonsensical and harmful regulations on LNT and ALARA through sensible regulations.
