May 2015 NRC Exam

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- A valid reactor trip signal has been received.
- The reactor will NOT trip automatically or manually.
- A Red Path for Subcriticality is in effect.
- The OATC is inserting rods manually.

INITIATING CUES:

The Control Room Supervisor instructs you to initiate emergency boration, per EP/1/A/5000/FR-S.1, (Nuclear Power Generation/ATWS), step 4.

EXAMINER NOTE: After reading cue, provide the applicant with a copy of EP/1/A/5000/FR-S.1 pages 3-5.

JPM C
May 2015 NRC Exam

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- Unit 1 is in Mode 4.
- Unit 1 shutdown was in progress for a refueling outage, when pressurizer pressure and level began to decrease uncontrollably.
- The CRS has entered AP/1/A/5500/027 (Shutdown LOCA) to address the reactor coolant system leak.

INITIATING CUES:

- The CRS has directed you to isolate the Unit 1 Cold Leg Accumulators by performing AP/1/A/5500/027 (Shutdown LOCA) Enclosure 14 (Isolating Cold Leg Accumulators).
- An AO has been dispatched to restore power to all CLA discharge isolation valves per EP/1/A/5000/G-1 (Generic Enclosures), Enclosure 9 (Power Alignment for CLA Valves).

EXAMINER NOTE: After reading the cue, provide the applicant with a copy of AP/1/A/5500/027 Enclosure 14.

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- A reactor trip has occurred on Unit 1 due to a loss of both Main Feedwater pumps.
- The CA system will not function.
- Attempts to restart the Main CF pumps have been unsuccessful.
- EP/1/A/5000/FR-H.1 (Response to Loss of Secondary Heat Sink) has been entered due to a "RED PATH" for the Heat Sink critical safety function while performing EP/1/A/5000/ES-0.1 (Reactor Trip Response).
- Bleed and Feed initiation criteria have been met.

INITIATING CUES:

- The CRS instructs you to initiate NC system bleed and feed by performing steps 19-24 of EP/1/A/5000/FR-H.1. Inform the CRS when the bleed and feed path has been initiated and verified.

EXAMINER NOTE: After reading cue, provide the applicant with a copy of EP/1/A/5000/FR-H.1 pages 28-36.

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- Unit 1 has experienced a Load Rejection due to a Zone A lockout.
- The immediate actions of AP/1/A/5500/003 (Load Rejection) have been completed.
- During the runback, the control rods stopped moving in auto and manual.
- The CRS and the OATC are responding using AP/1/A/5500/015 (Rod Control Malfunction).

INITIATING CUES:

- The CRS has directed you to perform step 3 of AP/1/A/5500/003.

EXAMINER NOTE: After reading the cue, provide the applicant with a copy of AP/1/A/5500/003 with the immediate actions completed.

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- Unit 1 is at 100% power.

INITIATING CUES:

Following a discussion with Glenn from RP concerning a premature gaseous release termination, the Control Room Supervisor directs you to set EMF 50L setpoints using OP/0/A/6500/080 (EMF RP86A Output Modules) Enclosure 4.2 (EMF RP86A Trip Setpoint Adjustment) to the following values:

- Trip 1 = 6300 CPM
- Trip 2 = 9000 CPM

OAC Program EMFLIB is currently not available.

EXAMINER NOTE: After reading the cue, provide the applicant with a copy of OP/0/A/6500/080 (EMF RP86A Output Modules) Enclosure 4.2 (EMF RP86A Trip Setpoint Adjustment).

Catawba Nuclear Station

JPM G

May 2015 NRC Exam

STEP/STANDARD	SAT/UNSAT
---------------	-----------

START TIME: _____

NOTE:

1. If desired, EMF setpoints adjustments may be performed from the “EMF SETPOINT” screen of OAC EMF Library (EMFLIB) Application. EMFLIB is user friendly, no procedure instructions are provided for this application.
2. The Trip Lamps can only be cleared if the activity level has decreased below the Trip Setpoint.
3. If any trip setpoint is >1000 cpm, the entered setpoint should be rounded down to the nearest 100 prior to entering to ensure the entered setpoint remains conservative.

STEP 1 3.1 **IF** necessary, press the clear key [CLR] to reset trip lamps

STANDARD:

Applicant verifies trip lamps dark or depresses the [CLR] key to clear alarms.

COMMENTS:

___ SAT

___ UNSAT

STEP 2 3.2 Press the function key [FUN] to bring up the “SELECT FUNCTION” screen.

STANDARD:

Applicant depresses the [FUN] key to bring up the “SELECT FUNCTION” screen.

This step is critical, due to being the only way to get to the select function screen, which is required to input new Trip 1 and Trip 2 values.

May 2015 NRC Exam**

SIMULATOR OPERATOR INSTRUCTIONS:

1. ENSURE NRC Examination Security has been established.
2. Reset to IC # 169.
3. Enter the password.
4. Select "Yes" on the INITIAL CONDITION RESET pop-up window.
5. Ensure simulator setup per table below.
6. Place simulator in RUN and acknowledge any alarms.
7. ENSURE "Extra Operator" is present in the simulator.
8. Place simulator in FREEZE until Examiner cue is given.

✓	Instructor Action	Final	Delay	Ramp	Delete In	Event
	VLV-KC024F (KC425A Rtn Hdr Cont Isol Outside VLV Fail To Position)	0				
	Perform actions of AP-21 up to step 8.

May 2015 NRC Exam

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- Unit 1 is at 100% power.
- AP/1/A/5500/021 (Loss of Component Cooling) has been entered.

INITIATING CUES:

- The CRS instructs you to perform step 8 of AP/1/A/5500/021.

EXAMINER NOTE: After reading cue, provide the applicant with a copy of AP/1/A/5500/021 (Loss of Component Cooling) completed through step 7.

Catawba Nuclear Station

JPM H

May 2015 NRC Exam

STEP/STANDARD	SAT/UNSAT
---------------	-----------

START TIME: _____

CAUTION A loss of KC cooling to the NC pumps results in a gradual approach to an overheated condition in approximately 10 minutes which will result in shaft seizure.

STEP 1 8. Verify KC flow to NC pumps as follows:

- 1AD-20, A/1 "KC SUPPLY HDR FLOW TO NCP BRGS LOW" – DARK
- 1AD-21, A/1 "KC SUPPLY HDR FLOW TO NCP BRGS LOW" - DARK

STANDARD:

Applicant determines that the listed alarms are lit and transitions to the RNO.

COMMENTS:

___ SAT

___ UNSAT

STEP 2 8.RNO.a. Ensure the following valves – OPEN:

- 1KC-425A (NC Pumps Ret Hdr Cont Isol)
- 1KC-338B (NC Pumps Sup Hdr Cont Isol)
- 1KC-424B (NC Pumps Ret Hdr Cont Isol)

STANDARD:

Applicant determines the red OPEN lights lit and green CLSD lights dark for 1KC-338B & 1KC-424B. Applicant determines that the green CLSD light is lit for 1KC-425A and depresses the red OPEN pushbutton. Applicant determines that 1KC-425A will not open.

I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- A LOCA has occurred on Unit 1.

INITIATING CUES:

- The CRS instructs you to place Hydrogen Recombiner 1B in service at the required power per OP/1/A/6450/010 (Containment Hydrogen Control Systems), Enclosure 4.10 (Operation of the Hydrogen Recombiners Following a LOCA), steps 3.1 through 3.3.14.
- All initial conditions are complete.
- Containment pressure is 4.3 psig.
- Containment hydrogen concentration is 5% as indicated on 1MC-7.
- Hydrogen Recombiner 1A is tagged for maintenance.

EXAMINER NOTE: After reading cue, provide the applicant with a copy of OP/1/A/6450/010 rev. 43, Enclosure 4.10 signed off through step 2.2. The copy of Unit 1 Revised Data Book Figure 10 will be given to the applicant when step 3.3.12.1 is being performed.

APPLICANT CUE SHEET

(RETURN TO EXAMINER UPON COMPLETION OF TASK)
May 2015 NRC Initial License Exam
JPM J

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- Unit 2 has experienced a loss of all AC power to 2ETB.
- The reason for the loss of AC power has been corrected.
- The 2ETB load shed is complete.

INITIATING CUES:

- The CRS instructs you to energize 2ETB from 2B D/G by performing AP/2/A/5500/007 (Loss of Normal Power) Enclosure 11 (Energizing 2ETB From D/G).

Catawba Nuclear Station

JPM K

May 2015 NRC Exam

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- Unit 1 and 2 are at 100% power.
- VI Lo Pressure annunciator is lit.
- VI pressure is 75 psig and slowly decreasing.
- AP/0/A/5500/022 (Loss of Instrument Air) has been implemented.

INITIATING CUES:

- The CRS instructs you to startup and align the Backup Temporary VI compressor #2 to the Instrument Air Header per the local copy of EP/1/A/5000/G-1 (Unit 1 Generic Control Room Enclosures) Enclosure 23 (Backup VI Compressor(s)) step 3.

EXAMINER NOTE: After applicant locates the local copy, hand them a copy of EP/1/A/5000/G-1 Enclosure 23.

Catawba Nuclear Station

JPM K

May 2015 NRC Exam

STEP/STANDARD	SAT/UNSAT
---------------	-----------

START TIME: _____

EXAMINER NOTE: Two Backup VI compressors should be available at any given time. A third backup compressor is stationed at the Catawba garage.
 Applicant should select Backup VI Compressor 2 for startup per the initiating cue.
 IF Backup Compressor 2 is not available then direct the operator to startup compressor 3 and start the JPM at step 5 (page 14 of this JPM).

STEP 1 3. To Start Backup VI Compressor 2 perform the following:

a. Verify engine oil (inside engine side panel) – GREATER THAN “ADD” ON DIPSTICK.

EXAMINER CUE: When dipstick is located, inform applicant - “Oil level is greater than “ADD”.”

STANDARD:

Applicant locates the dipstick and checks the oil level.

COMMENTS:

___ SAT
 ___ UNSAT

STEP 2 3.b. Verify compressor oil level (inside compressor front panel) – VISIBLE IN SIGHTGLASS.

EXAMINER CUE: When sightglass is located, inform applicant – “Oil level is visible in the sight glass (near full).”

STANDARD:

Applicant locates sightglass and checks oil level.

COMMENTS:

APPLICANT CUE SHEET

(RETURN TO EXAMINER UPON COMPLETION OF TASK)

May 2015 NRC Initial License Exam

JPM K

READ TO APPLICANT

DIRECTION TO APPLICANT:

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS:

- **Unit 1 and 2 are at 100% power.**
- **VI Lo Pressure annunciator is lit.**
- **VI pressure is 75 psig and slowly decreasing.**
- **AP/0/A/5500/022 (Loss of Instrument Air) has been implemented.**

INITIATING CUES:

- **The CRS instructs you to startup and align the Backup Temporary VI compressor #2 to the Instrument Air Header per the local copy of EP/1/A/5000/G-1 (Unit 1 Generic Control Room Enclosures) Enclosure 23 (Backup VI Compressor(s)) step 3.**
