August 17, 2015

To: Nuclear Regulatory Commission
Attn: Chief of Rules, Announcements & Directives
From: Barbara & Robert Resenthal
324 Woodland Drive, Los Osos, CA

Please do not grant a second license
renewal to the Diablo Canyon Power Plant.
Evacuation

We have lived in Los Osos since 1981.
When the plant first went on line there
were concerns about evacuation problems.
The county population has nearly doubled
already and by the time of the renewal
it may have tripled. Our transportation
infrastructure has little improved. On the
coast where we are so close to the plant
evacuation will be impossible.

Health

It should be the commission's responsibility
to address concerns over high cancer rates.
This should not fall on the citizens.

Storage

This is still an unresolved issue. To go
blindly forward is not logical. If we are
to count on future solutions, let's count
on solutions to replace nuclear energy.

Weather

There is no doubt of climate change. It is unknown how this will impact the Central Coast. Without that information we cannot predict into the dates of the renewal license. Our ocean temperatures are well above normal this year, by several degrees. Couple this with the heated water from the plants and marine life will be seriously impacted, with a ripple effect through the environment and economy.

Earthquake

While our situation is different than the Japanese, the failure to acknowledge the strength and unpredictability of nature is not. We do know that the plants are on a seismically unstable area — unpredictable to 100% safety. And that is what I am asking for — 100% predictable safety since there is no way out.

Sincerely,

Barbara Rosenthal and
Robert "Rosy" Rosenthal
