General Comment

Seeking to prove that radiation is good for you is methodologically flawed and non-scientific, especially as research has for so long shown the mutagenic and lethal dangers of radiation.

It is not scientific to set out with the goal of proving something to be true, and, this is literally a life and death matter.

Furthermore, it appears that you have missed the entire concept and meaning of immunity and immune response. If you stick your hand on a stove or in fire, yes, there is immune response, microscopic, which can show as macroscopic, in the form of redness and inflammation. But, do you keep your hand on the stove or in fire, saying that it is good for you? This summarizes your "reasoning" to raise the human radiation exposure by what you are proposing.

Keep the Linear No-Threshold Model and Standards in place. Italy needs to figure out their own problems with nuclear materials and not dump them on the United States!
