The U.S. Nuclear Regulatory Commission (NRC) will use a list of questions to seek external stakeholders' input on a variety of issues pertaining to the treatment of mitigating strategies in risk-informed decisionmaking (RIDM). The following is a sample of questions:

- Guidance currently exists for crediting equipment in a probabilistic risk assessment (PRA) (e.g. RIS 2008-15), does this guidance need to change or be enhanced in some way?
- Should the use of mitigating strategies equipment during normal plant operations (e.g. routine maintenance/outages) be credited?
- What are the means available to gather information necessary to develop equipment failure probabilities and human error probabilities for flex strategies and equipment?
- What are the industry initiatives (ongoing or planned) that would enable NRC's ability to treat mitigating strategies effective in RIDM?
- Do acceptable alternatives to PRA exist as possible ways a licensee could propose to justify crediting mitigating strategies for risk-informed decisions?
- If there are acceptable alternatives, how would those alternatives apply to different RIDM applications (Licensing, Reactor Oversight Process/Significance Determination Process, Issue Resolution, etc.)
