## General Comment

It appears obvious that the no-threshold model does not protect our people from the affects of radiation. What it does do is to save the government money. So, the government once again chooses monetary gain over the lives of it's people.

I live in an area of the country where FUSRAP is testing and remediating the decay products from uranium used in the Manhattan Waste Project. Our exposure is long-term and chronic. The cancers in our area are beyond the norm of what would be expected and the St. Louis County Health Dept. can support this. People are sick. People are dying. People have died. We cannot afford to have the standards changed. If the standards of exposure are changed to any model of lesser amounts, it can only be about the money...cost of testing, remediation, and lawsuits.

We cannot afford for our government to further ignore us. Aside from radiation in the creek, the airport, downtown St. Louis, we have illegally dumped Manhattan Project waste in a landfill that has an underground fire advancing toward it and is closer than 1000 feet apart. When that fire hits, fallout will be pluming into St. Louis/St. Charles and surrounding cities. DO NOT FORSAKE US, our children, our parents, and future generations.
