Dear Sir or Madam:

By letter dated August 31, 2015 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML15180A170), the U.S. Nuclear Regulatory Commission (NRC) issued Amendment No. 206 to Facility Operating License No. NPF-29 for the Grand Gulf Nuclear Station, Unit 1 (GGNS). This amendment consisted of changes to the Technical Specifications (TS) in response to Entergy Operations, Inc.'s application dated January 6, 2015 (ADAMS Accession No. ML15006A238), as supplemented by letter dated March 27, 2015 (ADAMS Accession No. ML15089A126). The amendment revised the GGNS TS 5.6.5.b, "Core Operating Limits Report," to add Topical Report "NEDC-33075P-A, Revision 8, GE [General Electric] Hitachi Boiling Water Reactor Detect and Suppress Solution – Confirmatory Density [DSS-CD]," as Reference 27. The amendment was submitted in support of the NRC's approval of the Maximum Extended Load Line Limit Analysis Plus amendment.

Subsequent to issuance of the amendment, the NRC staff identified an editorial error on the cover letter and signature page of the amendment. The amendment number was not inserted into either page. The NRC staff has revised these pages of the amendment to add Number 206.

Enclosed is the revised cover letter and signature page. We apologize for any problems caused by this omission.
