---

The majority of her experience is on the job training. As an “end user” at Canberra she has access to and has used all of our sources. Annual training is conducted for all End users and I have attached a training certificate specific for Kara. As a product manager at Canberra she is required to demonstrate all QC procedures and onsite training for many of Canberra’s products. Many of these procedures require safe handling and proficient use of both sealed and unsealed sources.

One of her educational products is an Ba-137m Iso-Generator which produces a liquid source. This is listed under Special Skills on her resume.

- Experience with Liquid Gamma Sources (Ba-137m Iso-generator)

I have spoken with Kara and with her permission I have added the lines below to her resume to better reflect her experience here. I have attached a revised copy of her resume.

- Experience with a variety of sealed and unsealed Gamma/Alpha/Beta sources ranging from < 1 µCi to > 400 Ci
- Trained in the safe use and handling of gaseous radioactive sources (K-85)

I hope this helps,  
Bill

Actually, I do have a question about Kara Morris. You requested to move her to 11A, which would allow her to handle material in “any” form, but there is nothing in the resume that describes her training or experience in handling materials other than as sealed sources (11B). If you have such documentation, I need that to list her in 11.A. If she doesn’t have training and experience in handling unsealed materials, she needs that before we would list her in 11A.

Betsy

Good morning Betsy,

I wanted to thank you for taking the time to speak with us yesterday at Canberra regarding our license amendment. As we discussed on the phone... my contact information is below. Please feel

free to reach out if you have any further questions. I'll look forward to the PDF copy of the request.

Thank you ,  
Bill
