**Subject:** Acceptance Review for FitzPatrick Relief Request RR-19 (TAC No. MF6616)

Mr. Adner:

By letter dated August 18, 2015, Entergy Nuclear Operations, Inc. submitted Relief Request No. RR-19 for the James A. FitzPatrick Nuclear Power Plant. The relief request would allow implementation of BWRVIP-05 (GL 98-05), "BWR Reactor Pressure Vessel Shell Inspection Recommendations," as an alternative to ASME Section XI required inservice inspections of the reactor vessel circumferential shell welds.

The purpose of this e-mail is to provide the results of the Nuclear Regulatory Commission (NRC) staff's acceptance review of this relief request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concludes that it provides technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed relief request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

Please contact me if you have any questions. A copy of this email will be made publicly available in ADAMS.

Doug
