Subject: Nine Mile 2 - Acceptance Review of LAR associated with Modification of TS 2.1.1 Safety Limit Minimum Critical Power Ratios (SLMCPR) (TAC No. MF6714)

By letter dated September 03, 2015 (ADAMS Accession No. ML15253A185), Exelon Generation Company, LLC (EGC) requested a license amendment request (LAR) for for Nine MilePoint Nuclear Station, Unit 2 (NMP2). The proposed change is to modify Technical Specification (TS) 2.1.1 ("Reactor Core SLs"). Specifically, this change incorporates revised Safety Limit Minimum Critical Power Ratios (SLMCPRs) due to the cycle specific analysis performed by Global Nuclear Fuel for Nine Mile Point Nuclear Station, Unit 2 (NMP2), Cycle 16.

The purpose of this e-mail is to provide the results of the NRC staff's acceptance review of this LAR. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed LAR in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.
