General Comment

Nuclear byproducts are too long lived with too many daughter products, all capable of upsetting the balance in biologic tissue. We don't understand its potential disruptive energy. Low level exposures are detrimental and the variety and pernicious nature of their ultimate expression outweigh temporal observation of hormetic benefit. We are, to reference Dr Helen Caldicott, seeing the greed and hubris of some, imperil all. I oppose adoption of expanded exposure levels for any but those who are informed and in pursuit of containing the waste we have already produced.
