General Comment

Exposure to radiation is unavoidable, more so today than before humans learned how to split the atom. Obviously, most of us survive this exposure for many decades. However, the spread of birth defects and cancer are measurable, and the association with high levels of radiation unavoidable. I see no reason to question the conclusions of Linus Pauling and others, that any increased diffusion of radioactive elements into the human environment will result in increases in human suffering. There is no safe level of nuclear radiation.
