## General Comment

After all these years, we KNOW that radiation causes health damage in particular cancer directly proportional to dose, and that there is no "threshold." Moreover, because the effects of radiation are cumulative, the sum of several small exposures are considered to have the same effect as one larger exposure!

Please, please let's keep the Linear No Threshold model in place and look out for ourselves and future generations!

Even if we do know how to cure (or lessen) cancer, we should still Never open up the possibility of more people contracting it. The health and neurological damages of radiation have been proven time and again. We ought to become more cautious and informed with time, and truly care about the well-being of everyone living in this great nation!

Thank you. :)
