Rockville, MD 20852-2738

Subject: Request for Extension to the Request for Additional Information for the Model No. WMG 150B Package, Docket No. 71-9366

Reference: 1) Revision 0 - Safety Analysis Report for the WMG 150B Package;
Dated April, 2015
2) Docket No. 71-9366, TAC No. L24977

Dear Mr. Saverot,

WMG has received and reviewed the NRC Requests for Additional Information (RAI) to the recently submitted Safety Analysis Report for the WMG 150B Package. Based on our review of the RAI's, WMG has determined it will take longer than allotted time to develop responses to the RAI's therefore a submittal date of October 15th will not be achievable. The analyses required for the responses to the RAI's, combined with WMG's intent to perform LME testing of A543 steel will require additional time. WMG is committed to providing Complete and Satisfactory responses that when reviewed by the NRC will allow the NRC to issue a license for the WMG 150B Package.

WMG formally requests an extension to the date of January 31th, 2016 to submit the RAI responses. Please consider this request and provide a response as soon as possible so WMG can direct their resources accordingly.

Respectfully,

A handwritten signature in black ink, appearing to read "Kevin Tuite".

Kevin Tuite
President and Chief Executive Officer
