## General Comment

Putting toxic nuclear waste near water and groundwater sites sounds horrendous to me. Water is a precious and endangered resource. We must preserve its purity as much as possible. I despair that humans have produced a toxin that is beyond their ability to mitigate safely. The only thing that makes sense to me for storing this terrible toxin is to store it in dry cask containers on site with as little shipping as possible. Then, we must STOP producing it. No nuclear power plants, no nuclear weapons.
