General Comment

The EIS for the Yucca Mountain high level nuclear waste storage system is flawed in many ways and should not have been undertaken.

There is no funding for this project so why is money being spent on an EIS?

The potential for radiation releases from transport of nuclear waste over millions of miles is not effectively addressed. The exposure of thousands of transport vehicles to terrorist attack with ever more sophisticated weapons has not been addressed.

The analysis of possible leakage into the water table concluding that only minor leakage can be expected is absurdly optimistic.

Many other concerns relating to geologic stability and cask design are not evaluated.

I could go on at length but I ask simply, please stop this waste of time and money.

Fred Frank
