General Comment

I write in opposition to granting license for Turkey Point Nuclear Plant, Units 6 and 7.

This is a massive project-there will be unavoidable and huge impacts on both Biscayne National Park and Everglades National Park.. These parks are national treasures. The proximity of the proposed Nuclear Plants are, in my view, completely incompatible with National Parkland. The powerful new reactors (1,117 MW each) are to be cooled primarily by 90 million gallons per day of recycled Miami-Dade County sewage and wastewater. This water will not be pure H2O - and some will be released over Biscayne Bay and surrounding wetlands along with steam in the planned cooling towers.

The included powerlines running in the eastern end of Everglades National Park will bring an industrial environment visible for mile, completely incompatible with the purpose of the National Park. The powerline corridor will have negative impacts on bird rookeries, and likely accelerate the introduction of non-native species to the Everglades ecosystem.

The issue is not Nuclear Power-it is granting license for Industrial development in the vicinity of pristine national parkland.

I urge a denial of the licenses.
