## General Comment

It has come to my attention that America is putting it's nuclear waste in casts that are only one half inch thick, while Europeans put their waste into casts that are at least eighteen inches thick!!

I am opposed to approving these casts because they are too thin.

We need to demand of our vendors that they provide casts that are thicker than 1/2 in thick.

We need casts that will survive more than 100 years.

We need casts that will NOT crack after 20 years.

It is bad enough the nuclear industry has refused to find a way to nuetralize the nuclear waste that now threatens all life on our planet. There is enough nuclear waste in North America to destroy the very sustainability of human life, much less many other mammals.

It is time for the Nuclear Regulatory Commission to do the other part of their mandate: PROTECT HUMAN HEALTH.

It is time for the Nuclear Regulatory Commission to stop being a rubber stamp to the GROSS NEGLIGENCE by the nuclear industry of producing the cheapest, most dangerous methods of storing their waste.

I expect the NRC to deny these products and ONLY approve products that will protect our grandchildren from nuclear waste for more than 100 years. We need to demand viable storage units that will endanger all life on our planet.

SAY NO TO WEAK, UNSTABLE STORAGE UNITS THAT DO NOT LAST MORE THAN 100 YEARS AND ARE ONLY 1/2 INCH THICK.

DEMAND OUR VENDORS TO PROVIDE STORAGE UNITS THAT WILL PROTECT OUR PLANET. NOT THESE UNITS.
