General Comment

This is FL. Is there a reason that solar power is just completely ignored here? Maybe FPL could invest in some Elon Musk's solar panels. At least then they can know exactly how much per unit the item will cost and the expected outcome. At this point their plan has no realized budget and is also toxic to the environment. Who decides to build something that isn't even hurricane proof in a hurricane state? With no budget in mind - this will just be another one of Florida's great money sucking failures. Please don't allow this to happen for financial reason, environmental reasons and especially because the proposed project will not stand the test of time.
