General Comment

My name is Kenneth Freelain, and I am a licensed professional engineer. I can be reached by telephone at (301) 891 - 0496. I can be reached by email at

"engineering.tribute@gmail.com."

In this brief statement, I will outline some of the reasons why the Yucca Mountain Nuclear Waste Repository should be discussed and analyzed during the forthcoming

"Engineering Tribute to the Presidential Inauguration of January 20, 2017."

The "Engineering Tribute" will be videotaped, and then it will be aired on television.

I am now extending this open invitation to individuals, corporations, and/or to

SUNSI Review Complete

Add = C. Sanchez (chp)

government agencies who wish to participate by eitherChoice # 1) by providing me with pre-recorded material which has already been pre-recorded for television, or.....Choice # 2) by coming into our television studios and then recording the material which can be aired, on television, at a later time.

The forthcoming "Engineering Tribute" should include information about the United States Department of Energy, the Nuclear Regulatory Commission, and/or the proposed Yucca Mountain Nuclear Waste Repository.

Now, here is some historical background information about the "Engineering Tribute".

During various "Engineering Tributes", a variety of subjects have been discussed over the years, including bridges, roads, the condition of the infrastructure, water supplies, environmental protection, climate control, mass transit systems, etc.

The next "Engineering Tribute" is being scheduled to take place after the "Presidential Inauguration of January 20, 2017". During past "Engineering Tributes" various individuals, governmental agencies, and non-governmental organizations have been invited to submit video footage which can be incorporated into the relevant material. The following three (3) topics should be included in the "Engineering Tribute of 2017".

Topic # 1 - Information about the Yucca Mountain Nuclear Waste Repository

Topic # 2 - Information pertaining to the United States Department of Energy

Topic # 3 - Information which is relevant to the United States Nuclear Regulatory Commission

The closing of the Yucca Mountain Nuclear Waste Repository leaves many American non-governmental entities, such as utilities, without any designated long term storage site for the high level radioactive waste which is stored on-site at various nuclear facilities around the country. Right now, the US government disposes of its nuclear waste at the Waste Isolation Pilot

Plant in New Mexico, in rooms which are located underground. The Department of Energy is reviewing other options for a high-level waste repository.

I want to thank you for your time and attention, and interested prospective participants are welcome to call me at (301) 891 - 0496. Those who care to send me an email may use the following email address.
