General Comment

Yucca Mountain should be put to use. Yucca Mountain was built in the 1950's to hold 77,000 metric tons, yet today we have much more than that and are still creating more nuclear waste. Eventually nuclear waste will need to be stored somewhere and Yucca Mountain alone will not suffice. The risks is greater as the nuclear waste sits in cooling pools in nuclear power plants across the U.S. As nuclear waste sits in cooling pools it solidifies. So there isn't a risk for the nuclear waste entering underground water and contaminating near by farms and water systems.
