General Comment

Please take time to consider that the reason all the world is trying to stop nuclear weapons is because it is devastating and kills everything. With that thought, why would you be wanting to raise the limits for exposure? What seems to me and is very logical is that all these nuclear plants are aging and present the possibility of leak that would allow for more radiation to be released into the environment so in order to cover it up you would just raise the levels and say it is ok. According to everything that is coming to light there is not even a logical storing solution to the waste of these plants. I can not see that money is more important than human life. Please do not think I am just against this resource all together. I think it served a very small amount of actual power which in turn weighed against the risk is just not worth it. Advances in other areas have shown the potential for a more resourceful outcome. I say no to expand and move to strengthen the affects of aging nuclear plants and have them decommissioned on schedule or before if they are a risk to any living thing.

Thanks,
Jackie
