General Comment

I think and believe that it is well know and well understood by most that there is no safe limit to radiation. Those that are experts in the field with Phd's and the like will say the same thing. I will let them site studies and such, all I have is common sense. If anything, if a limit is to be placed on exposure it should be as low as what happens naturally. I understand that that limit is something very far removed from what is being proposed. Reduce, not increase.
