me dated 11/3/2015 (ML15287A257) stated "In summary, the NRC's role in the proposed natural gas pipeline is limited to its regulatory authority of ensuring the safe operation of the Indian Point operating facility. Based on the review of Entergy's 50.59 site hazards analysis and the NRC's independent calculation results using conservative assumptions and rationale, the staff has determined that Entergy has appropriately concluded that the proposed pipeline does not introduce more than minimal additional risk to the Indian Point facility and, therefore, the change in the external hazards analysis associated with the proposed pipeline does not require prior NRC review and approval."

Please provide a copy of this referenced calculation.
