NO SAFE DOSE / DENY the pronuke Hormesis propaganda

As founder of San Clemente Green, a citizens group of nearly 5,000 residents near San Onofre, I feel compelled to respond to your request for input regarding the "Linear No Threshold Model and Standards for Protection Against Radiation". Without any response, our silence might be interpreted as passive acceptance, when nothing could be further from the truth.

Let this blanket statement stand as an advisory to the NRC that we have lost faith and confidence in your organization and purported goals. You profess to seek to regain the public's confidence with words, but contradict that with your deeds.

It has not gone unnoticed that even after evidence of misconduct and lax oversight of the most dangerous industry on the planet, you have denied an investigation into what really went wrong with the RSG project at SONGS. A situation that developed due to your own negligence. Then you cancel a study that was underway to analyze cancer cases near nuclear power sites, of which one was in our community. Now you suggest that more radiation is acceptable and perhaps even healthy "hormesis".

Your credibility has been depleted to the extent that it may never be regained if you continue on the path you are on. Start taking actions that are consistent with your responsibilities to the public and stop favoring the industry you are supposed to regulate. Perhaps then we can work in tandem to secure nuclear safety.
