[Final Comments on Exhumation Study 11.3.15.docx](#)

Amy,

It was good to talk with you. I would like to receive any links you could provide re: NRC input and the CSAP.

We have not been receiving any of the updates about the things we are most interested in.

We have not been informed about the contamination under the concrete pad or about other CSAP activities.

Erosion is a major factor at this site and climate change-- especially heavy rainfall could act synergistically to release rad waste in a landslide event.

Instead DOE decided to deal only with average rainfall for assessments. Clearly this does not represent a proper assessment.

I recommend reading the Climate change memo from the Citizens Task Force that was sent to all our officials.

Earlier comments were sent on climate change if you are interested in the problematic "climate guidance" prepared by a consultant.

I am attaching our recent request for Agenda items and our recent comments on the Exhumation Study.

Barbara Warren, RN, MS
