Main Office Inspection Next Inspection Date: N/A

Field Office Inspection _____

Temporary Job Site Inspection _____

PROGRAM SCOPE

As of this inspection, the licensee is in the process of decommissioning bldg 140 which contains equipment and construction material radiologically contaminated as generated from a high energy linear accelerator. The licensee had submitted a decommissioning plan which is under NRC review.

PERFORMANCE OBSERVATIONS

The inspector observed licensee personnel performing core bore sampling of soil surrounding bldg 140, but not under the building. The purpose was to determine whether soil was radiologically contaminated as a result of previous licensed operations. The licensee and inspector did not identify radiologically contamination, using a portable radiation survey meter, within the soil samples. The licensee plans to perform a gamma spec. analysis of the samples the first quarter of CY2016 as part of its additional characterization of the site.

No findings of significance were identified.
