**Subject:** (CAC Nos. MF6974 and MF6975)- Acceptance review for LAR dated October 8, regarding Secondary Containment Personnel Access Door Openings  
**Importance:** High

Ron and Ken,

**PLEASE NOTE ADDITION - CAC No. for NMP2**

By letter from Exelon Generation to NRC, regarding CAC MF6974, "License Amendment Request – Proposed Changes to the Technical Specifications to Address Secondary Containment " dated October 8, 2015, (ADAMS Accession No. ML15281A028). The proposed amendment changes NMP1 and NMP2 TS to provide an allowance for brief, inadvertent, simultaneous opening of redundant secondary containment personnel access doors during normal entry and exit conditions. Specifically, NMP1 LCO 3.4.3 and SR 4.4.3 requested to be modified to acknowledge that secondary containment access openings may be open for entry and exit. Further, the definition for Reactor Building Integrity, specified in NMP1 Technical Specifications (TS) Definition 1.12, would be revised for consistency to reflect the changes proposed to TS Section 3.4.3 LCO and SR 4.4.3. The NMP2 SR 3.6.4.1.3 is modified to acknowledge that secondary containment access openings may be open for entry and exit.

The purpose of this e-mail is to provide the results of the NRC staff's acceptance review of this LAR. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant. The proposed amendment changes NMP1 and NMP2 TS to provide an allowance for brief, inadvertent, simultaneous opening of redundant secondary containment personnel access doors during normal entry and exit conditions.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed LARs in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.
