## General Comment

No amount of radiation is safe for living organisms. The higher the rate of growth of the organism the greater the risk of damage. The model being used in the present proposed rule is not a good, or correct model, nor congruent with the best understanding of the physics, chemistry & biological effects in question. Approval of the Proposed Rule in its present form will result in a continuation and increase in the damage to human persons and to our life support systems, and encourage continued travel down the dead end of nuclear power. Thank you.
