License No. SNM-2507

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION INDEPENDENT SPENT FUEL STORAGE
INSTALLATION
PROPOSED TECHNICAL SPECIFICATION CHANGE REQUEST REGARDING
STORAGE OF INCREASED MAXIMUM ENRICHMENT AND BURN-UP FUEL IN A
MODIFIED TN-32B STORAGE CASK
RE-SUBMITTAL OF SUPPLEMENTAL INFORMATION

On August 24, 2015, Virginia Electric and Power Company (Dominion) requested an amendment (NRC Accession No. ML15239B251) in the form of revisions to the Technical Specifications to License Number SNM-2507 for the North Anna Power Station (NAPS) Independent Spent Fuel Storage Installation (ISFSI). The proposed amendment would allow storage of spent fuel in a modified TN-32B bolted lid cask as part of the High Burn-up Dry Storage Cask Research and Development Project sponsored by the Department of Energy (DOE) and the Electric Power Research Institute (EPRI).

On September 30, 2015, NRC Senior Project Manager John Nguyen requested several calculations and input / output files referenced in the above submittal. The requested material was subsequently supplied to Dominion by AREVA/TN and submitted on October 30, 2015 (Dominion Serial No. 15-369B). That submittal was comprised of several Digital Video Disks (DVDs). The formatting of the files on the DVDs was determined to be inadequate for docketing by the NRC Document Control Desk. Therefore, the calculations requested have been printed and are attached (Attachment 1). All enclosed materials were determined to be proprietary by AREVA/TN as attested to in the attached affidavits (Attachment 2).

Dominion was also been requested to supply input/output files associated with several calculations. Paper copies of these files cannot be supplied due to their size and format. We propose that any input/output files that the NRC wishes to review be done so at a site agreeable to the NRC (e.g., AREVA/TN office near NRC headquarters). Alternatively, if technically possible, and agreeable to the NRC, requested information may be viewed on Dominion's ePortal.
