General Comment

The risk of contaminating the water supply is to high. The nuclear waste needs to be stored in a different location. Water is a scarce resource in the area to begin with. Building there could compoud the problem.

In addition, the build site should not boarder a portected area, such as a native american reservation, as reported in an online article. Doing so would undermine the purpose of preserving the land, and is insulting to those whom recieved it. As we near the "holiday" marking the slaughter of native people (Thanksgiving,) consider the devastation radiation will have on the population near the neuclear waste site. They were allocated a small peice of their home land, and now a toxic dump will be built right next door. That is population controle at its worst.
