RE: Notifications

To Whom It May Concern:

In accordance with Part 20, we are notifying the Commission that one of our Radiographers has received an annual dose exceeding 5R. He was performing pipeline radiography using a QSA Global 880 Ir192 source with a high production rate all year. 2 months ago when we saw that he was approaching his limit, he was instructed to limit his exposure by having the other technician handle the radiography. Although his daily readings that he recorded showed that he was within the limit, upon processing his film badge we discovered that he has exceeded.

The technician is [REDACTED]. He is a member of the Union Local [REDACTED] who was working for us on a project since 2014. His total dose is attached and is 5315 MR.

[REDACTED] was immediately pulled off of all radiography and will not be able to return until he completes a 40-hour retraining class.

Thank you,

Don B. Shumway, Jr.
RSO
